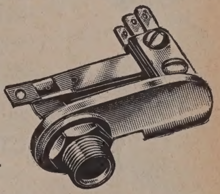
"93" SERIES JACK

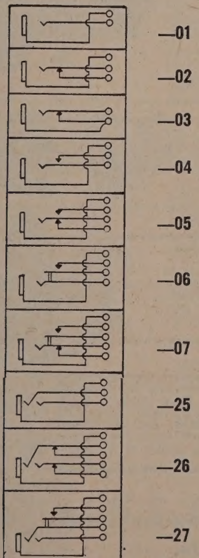
A short frame jack with springs mounted parallel to panel. Used particularly where depth behind panel is limited, on such applications as intercom systems, P. A. amplifiers, etc. Mounting is by means of threaded bushing ⅜" diameter, rigidly attached to a steel frame. May be mounted on panels up to $\frac{3}{16}$" thick. Contact springs of nickel silver, terminals hot tinned. See diagrams below for circuits.



No. 93-01	$ .70
No. 93-02	.85
No. 93-25	.85
No. 93-26	1.10

In addition a number of other circuits can be produced on order. Your inquiry will be given immediate attention.

All TRIMM jacks have a standardized coding consisting of the jack series number plus a dash number indicating spring arrangement, a few of which are shown below.



"91" SERIES JACK

A long frame jack having a threaded mounting bushing and which can be attached to panel by this alone, or by a mounting screw as is done on the "90" series jacks. May be mounted on panels up to about ¼" thick, having ⅜" hole. Depth behind panel 3⅛".

Frame is of very heavy gauge steel, zinc plated with dichromate finish. Springs of nickel silver. See diagrams below for circuits. Most circuits listed for "90" series can be supplied in "91" series. Those listed are the more commonly produced.

"90" SERIES JACKS

Extensively used in jack panels and other high quality communication equipment. Commonly known as the telephone type jack. Bushing fits 29/64" diameter hole. Available in two modifications of the frame referred to as the "A" and "C" frame. These differ only in the orientation of the mounting plate with respect to the plane of the springs. Unless specified otherwise the "A" frame is supplied.

Frame of steel, heavily zinc plated with dichromate finish. Bushing of brass, natural finish standard (nickel plated or other finishes available on production orders). Springs of nickel silver, terminal ends hot tinned for ease in soldering. Contacts are of palladium-silver alloy. The circuits listed below represent those most commonly produced, but about sixty-five circuits are available. Write for specific information.

UNIVERSAL THIRD-HAND TEST PRODS

THE KLEPS SERIES of universal Third-Hand Test Prods reaches into the most out-of-the way places and if desired latches onto test points to completely free your hands. Any point in the circuit can be monitored. Positive contact is established by spring action. The special shape of the tip provides a firm grip with a locking action which cannot slip off. Simply push the button to hold, and push again to release.

Holds on to wires, solder joints, terminals, small projections, nuts and screws. It fits into the tiniest openings. Completely insulated body can withstand up to 5,000 volts. No fear of shorts or inadvertent contact with adjacent wiring . . . only the tip is exposed.

Offset socket accommodates either a bare probe wire or a banana plug. A set-screw on the socket may be used to firmly grip the test probe wire. No soldering is necessary. There are rigid and flexible types as well as longer or shorter prods to suit your needs.
Colors are red or black.

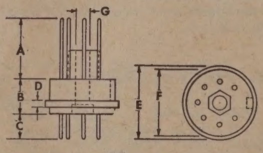
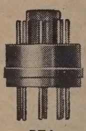
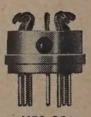
TUBE BASE PLUGS



P7



P7A



KF1.335

VECTOR TUBE BASE PLUGS have mica-filled castings and phosphor bronze pins. The wide variety of pin configurations on the top side of the plugs make possible design features not possible with other plugs. Plugs may be mounted as follows:

1. With a 4-40 or 5-40 screw through the center of the plug. The 7-pin miniature and 9-pin noval plugs have a recessed hexagonal hole in the base which fits a 4-40 or 5-40 small pattern nut.

2. With a retainer ring in a plate or chassis. Retainer rings are indicated by adding "R" after K or P in the catalog number.

3. Where round shells are to be attached, the 7-pin and 9-pin plugs without a keyway can be furnished with a threaded insert in each side which accommodate a 1-72 thread screw. Threaded inserts are indicated by "F" in catalog number.

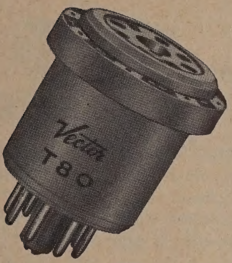
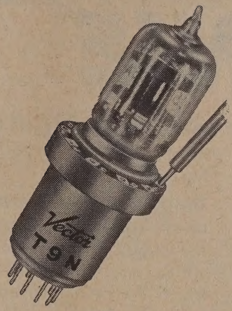
TUBE SOCKET TEST ADAPTERS



T80



T9N

TUBE SOCKET TEST ADAPTERS are inserted between the socket and the tube and provide test tab elements for checking. Connections are wired straight thru from plug to socket. Beryllium copper socket contacts for long-life — molded tan phenolic bodies.

SOCKET EXTENDERS

SOCKET EXTENDERS provide a replaceable unit for use in tube testers. Wear is shifted from the socket in the tester to the one in the Extender so that when it is worn out a new one can be easily inserted. Sockets have highest grade beryllium copper contacts. A screw projects thru the plug and may be used to hold the unit firmly in place if desired. Socket to plug leads are soldered and an outer shell is used.

THE ROTOPROBE

THE ROTOPROBE is a new type of test adapter to which a rotating test lead is permanently attached. Rotation of the shell causes a contact arm to move across the pins connecting the socket elements so that any position may be quickly contacted. This serves the same purpose as the usual Test Adapters but is more convenient and faster.

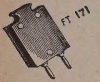
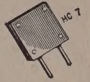
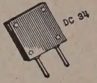
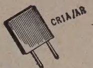
TEXAS CRYSTALS...FOR EVERY PURPOSE









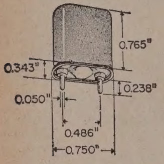
Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

CRYSTALS MADE TO ORDER

M 1,001 to 1,600 KC .005% TOL.	$4.50
1,601 to 2,600 KC .005% TOL.	$2.75
2,600 to 9,000 KC .005% TOL.	$2.50
9,000 to 10,000 KC .005% TOL.	$3.00

Low frequency crystals from 1001 KC to 2100 KC are space mounted —all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER



HC 6/U .050 PINS

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E., Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

MIL-SPEC KNOBS

In stock! For immediate delivery! And produced by National! . . . a complete line of standard plastic control knobs made in conformance with MS-91528. There are four basic types: round, pointer, spinner (each with or without skirts) and dial skirted round . . . available in three different shaft sizes. Finishes are gloss, matte, or to your color specifications . . . in all Mil-Spec sizes.

Knobs: Made of plastic, type III, class H2, per Specification L-P-349. Set Screws: Cadmium plated, class 3, type II, per Specification QQ-P-416. Inserts: Brass, composition 4, hard, per Specification QQ-B-613.

COILS-FILTERS-CHOKES

National Radio Company is engaged in the manufacture of precision coil and filter assemblies. Why not let our engineering staff quote on your specific requirements? In addition to coils and filters made to customer specifications, National Radio Company can supply a wide variety of stock coils for the electronic industry. Typical of these coils are the following families:

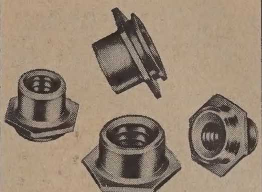
R-45 series, a new family of ferrite bead chokes for use as filament chokes, parasitic suppressors, and series elements of low-pass filters for frequencies from 5 to 200 mc. Insulated with an impregnated fiberglass sleeving, these chokes will handle 2 amperes of filament current with voltage drop of less than 0.02 volts, temperatures to the Curie point of 125°C.

R-40 series ferrite-core chokes . . . extremely high Q for small size. They are primarily for use in networks and filters at frequencies from 50 kc to 1500 kc, and as resonant elements in IF and RF circuits. Fungus-proof varnish impregnation per MIL-V-137A.

R-25 series MIL-inductance chokes for high frequency circuits, as filament chokes and peaking coils, inductance per MIL-C15305A, coil forms per MIL-P-14, and impregnation per MIL-V-173A.

R-33, R-50 and R-60 series RF coils are wound on molded phenolic forms per MIL-P-14 and coated with a tough, fungus-resistant varnish. R-50-10 choke is wound on a powdered-iron coil form instead of phenolic.

CAPTIVE NUTS
SELF-LOCKING TYPE



Self-locking, wear-resistant, machined, stainless steel threaded inserts for use in aluminum or brass. Easily applied, their reliable grip in the parent metal as well as their self-locking ability make them ideal for the variety of purposes they are designed to serve. The complete line includes one basic type in four sizes. Each of the four sizes may be obtained for insertion into any of five metal thicknesses.

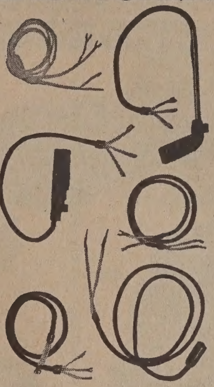
Material—Stainless steel Class 303 per FED QQ-S-763b

Finish—Passivated per MIL-P-12011

Other captive nuts and studs manufactured by National Radio Company include the line of exclusive "Flush Mount" types. Available in five sizes for use in metal thickness from 1/16" up. They provide permanent tapped holes and a flush fit on both sides of sheet.

The engineering staff will be glad to discuss your applications and possible variations to best meet your requirements.

ELASTICABLE



Elasticable is an elastic type wire, made in single and multiple conductors. It will stretch to more than three times its relaxed length. This unique elastic characteristic in a straight (not coiled or spring loaded) extra flexible wire gives the designer a new material to further his design concepts and assist him in solving heretofore impossible design problems. Five types, three commercial and two military are available as stock items. A sample specification of one type is:

Type 2—Core . . . natural rubber
Insulation . . Nylon (braided)
Conductor . . bronze tinsel
Diameter . . . ⅛" approx.
Resistance . . 1.0 ohm per ft. approx.
Elongation
single conductor 300%
multiple conductor 275%
Operating temperature
range . . . . . . −25°C to +85°C

National Radio is providing many companies with complete assemblies incorporating special terminations, molded parts and custom mechanical configurations. The Elasticable Application Engineering group is available to discuss electric and mechanical characteristics, applications and terminations. Why not let them quote on your finished Elasticable cable assembly?

OTHER NATIONAL COMPONENTS

In addition to knobs, chokes, drives and captive hardware, National Radio Company also manufactures a complete line of dials, coil forms, condensers, tanks, grid and plate caps, IF transformers, tube and crystal sockets, ceramic insulators, bushings, spreaders, couplings, terminal assemblies, other electronic and electro-mechanical components. For specific design or development applications problems, write or call.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil, s.t.), continuous service—450°F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellant, voltage rating, sea level 750v r.m.s., flash-over, sea level 3000v r.m.s., flash-over, 50,000 ft. 1300 v r.m.s.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012″ less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040″ or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly—cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry. circuitry.

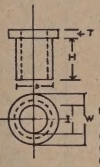
ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec

Birnbach All-Nylon Fastenings are made of Zytel 101*, a Polymide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

BIRNBACH NYLON BUSHINGS AND SPACERS



Designed with wide flanges to completely isolate screw from mounting surface, useful where hi tensile and torque requirements require high strength non-insulating screws. Natural color.

CAMBION TERMINAL-SWAGING TOOLS

HAND SWAGERS: For small-volume staking, Cambion Hand Swagers are recommended. These Hand Swagers are machined from fine tool steel, carefully tempered for long wear. They can be used manually or in a kick press, pneumatic press, or riveting machine. All tool diameters are 1/2". Hand Swager tooling is designated by the HS prefix.

PRESSURE SWAGERS: Cambion Pressure Swagers are specially designed for mounting Cambion terminals on terminal boards. These swagers are sturdy, precision-built, hand—operated, cam-action rolling tools. Designed for quick, solid, uniform swaging of solder terminals, Cambion Pressure Swagers are adjustable to a wide range of terminal board thicknesses by setting the anvil at the proper height. Terminals may be swaged in place as far as 1⅞ from the board edge. Pressure is adjustable and uniform, assuring good, even peening.

Pressure Swagers are furnished complete with one set of tooling. Refer to the terminal tables for proper PSA and PSP tooling for each type of Cambion terminal. When ordering, specify part number of terminal, as well as tool number. Additional interchangeable anvils and punches are available for Cambion Pressure Swagers.

HOPPER STAKERS: For high-volume staking, involving thousands of terminals, Cambion Hopper Stakers are recommended. The Cambion Hopper Staker is a semiautomatic device for feeding and staking Cambion solder terminals at approximately 100 terminals per minute. For additional information, consult the Factory.

RATIO DRIVES—Ball Bearing Type

Compact, durable, exceptionally smooth action

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S WORM GEAR RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

These handy couplings, capable of withstanding 30KV, are made of high grade Bakelite throughout except for the stainless steel screw driver tip molded within the drive shaft. Mounting hardware supplied.

OFFSET-SHAFT COUPLINGS

Cat. No. AP-15299
Extension shaft couplings for ±30° offset, provide insulation in excess of 10KV.

These highly versatile and durable insulated couplings are made with single-unit, molded Nylon-to-metal insert construction. Application requires two couplings and permits smooth control of two parallel shafts that are offset from each other up to 30 degrees and at separations greater than 3 inches. Secured to component and control shafts (1/4") by 2 set screws.

Note: Coupling is accomplished with a 1/4" shaft of any length (Not furnished). Coupling shaft is keyed to each coupler by steel drive pins supplied by JAN.

In addition to their application as Offset-Shaft Couplings, these units are widely used to correct for inadvertent misalignments especially where components must be located at distances remote from their panel control point.

SLIP-CLUTCH, SAFETY KNOBS

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch", automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

Model No. K-1475 Slip-Clutch knobs are designed similar to No. K-1375 except for larger dimensions and utilize cast aluminum in place of Bakelite.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields. In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN BEZEL ASSEMBLIES.

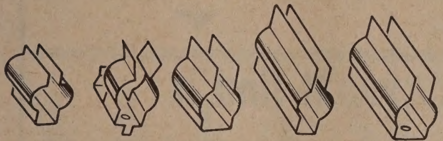
These washers act as a chassis mount for transistors. Made of .002 muscovite mica precision die cut to shapes for most transistors in use today. Good thermal conductivity where transistors must be isolated from the chassis. Also available in .005 thick mylar or silicone varnished fiberglass.

● Special types fabricated on special order ●

Write for our brochure showing dimensional characteristics and description.

HEAT SINKS



These low cost heat sinks effectively dissipate excessive heat from transistors. Longer transistor life in applications where both good thermal conduction and durability are necessary. Made of steel cadmium plated, also supplied in beryllium copper with silver plate or black finish.

STANDARDIZED PERFORATED BAKELITE BOARDS

Prototype development is simplified by using these standardized pre-punched bakelite boards. Six patterns described here are available from stock. The "G" pattern has .062 dia. holes on a .200 diameter hole circle and is ideal for subminiature wiring using transistors and diodes. The other patterns were chosen for their practicability. **MATERIAL:** GRADE XXXP (MIL-p-3115B) or paper base Epoxy furnished as our standard. Other grades of Epoxy, glass silicone, copper clad either one or both sides are available on special order. Lengths up to 39" furnished if requested.

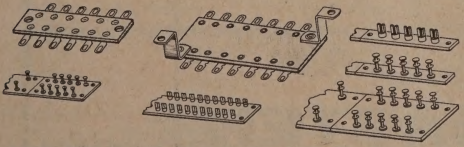
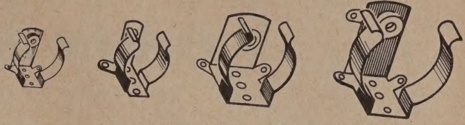
STANDARDIZED TERMINAL BOARDS



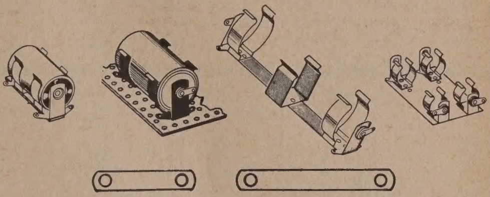
A wide range of sizes for every requirement. You may choose a variety of insulation, terminals, hardware, finishes or marking. Made of certified materials that meet with MIL specifications.

SPACE-SAVER BATTERY HOLDER— INSULATED AND NON-INSULATED TYPES.



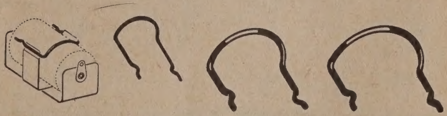
These holders are available insulated contact or with a dimple contact. Provides positive contact in either case. They are compact and economical. The "AA", "C", "D", Mercury and Ni-Cad batteries are accommodated. Made of SAE 1065 steel heat treated to spring temper and nickel plated. Insulated type has steel nickel plated eyelet and resin impregnated vulcanized fibre insulation. Snap-on washer for polarization will be supplied upon request.

SPECIAL APPLICATIONS



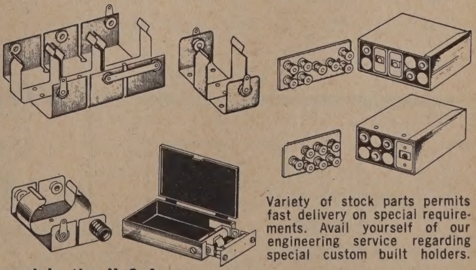
A few examples showing the manner of mounting the above mentioned holders. They can be fastened by screws, rivets, or eyelets to either an insulated base such as bakelite, steel or aluminum. Ideal for mounting directly to a chassis or printed circuit board. We can supply these with POLARIZED washers and straps to eliminate wiring.

RETAINERS FOR KEYSTONE CLIPS



These retainers slide on and compress the lips of the clip preventing the battery from shifting or loosening in the holder. Recommended for use where shock or vibration is encountered. Made of high carbon steel, heat treated to spring temper and nickel plated.

SPECIAL ASSEMBLIES



Variety of stock parts permits fast delivery on special requirements. Avail yourself of our engineering service regarding special custom built holders.

SUB-MINIATURE R.F. CONNECTORS

Radically different. Provably *better*. And you can tell them at a glance—by their *hexagonal* bodies. The only connectors that can be wired and rewired in factory, lab, shop or field, *without special tools*. Typical advantages:

Successfully withstand pull-out strain in excess of 20 lbs.

Captivated contacts insure proper engagement of mating parts.

Clamping parts, insulators and contacts readily assembled on cable before insertion in connector body.

Gold-plated hex stock allows assembly with usual pliers or small wrench.

Contacts soldered to center conductor of cable, insuring proper connections.

No distortion of cable insulation that might affect electrical characteristics.

Flexible design accepts all RG-188/U MIL cable diameters.

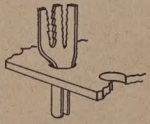
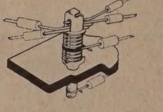
VECTOR PUSH-IN ZIP TERMINALS



T9.4



T30

T28

VECTOR PUSH-IN TERMINALS simplify "breadboarding". Push them into .062 or .093 holes in 1/16″ or 3/32″ Vectorbord panels and they hold without staking. (May be staked if desired for maximum holding). Each terminal has serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires, small slot holds transistor leads. The T9.6 also has special slot to accommodate diodes. All types have thru-shank construction enabling riser wires to be inserted down through center of terminal, and slotted shank end for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable, truly solderless terminal for experimental circuitry. Holds up to six leads without soldering. May be used over and over—permits reusing expensive components. Packaged in bags of 10 and 100.

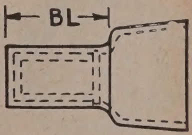
These devices are designed to give high pressure spring loaded contacts. They incorporate a locking action caused by mating a depression on the male tongue with a raised pip in the female slot when the parts are engaged. Insulation is not available on the flag design.

NYLON-INSULATED CLOSED-END CONNECTORS



Material – Connector: Tin plated seamless brass.
Insulation: Natural color molded nylon.

Wire ranges shown in the table represent various cumulative totals of wire diameters that may be combined and inserted for crimping. A completely insulated splice of two, three or more wires may be quickly and cheaply made as follows:

1. Strip insulation to show 3/8" to 1/2" of bare wire.
2. Insert wires fully into cap.
3. Squeeze barrel with crimping tool.

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. **Running Time Meters** are often used in conjunction with reed type frequency meters.

HOYT moving-coil Meters are built on the D'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models.

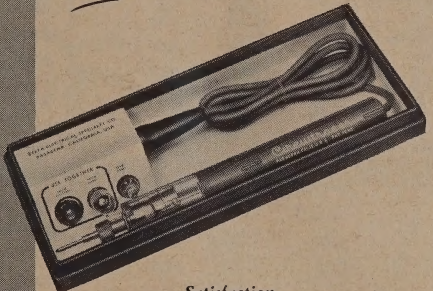
DESCO* Circuitracer*

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

Pocket Size!

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for simple continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster, easier than expensive, bulky meters.



Satisfaction Unconditionally Guaranteed

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

Weighs only 2½ ozs.

INCREMENTAL INDUCTANCE BRIDGE
TYPE 1110-AB

USES

The Incremental Inductance Bridge is designed for measuring the inductance of Iron Core components at any frequency up to 10,000 cycles. Inductors can be measured with a superimposed direct current, therefore the bridge will measure the incremental inductance of coils. The bridge can be used for detemination of storage factor, "Q", either at a given frequency as a function of the applied voltage or at a given voltage as a function of the applied frequency. The bridge can be used by the manufacturers of iron core components for testing filter chokes, high Q coils, and iron core audio and supersonic frequency components. Due to its very wide inductance range the instrument can be used as a general purpose laboratory inductance bridge.

SPECIFICATIONS

Inductance: 1 Millihenry to 1000 Henry.

Frequency: The bridge is calibrated and adjusted at both 60 and 1000 cycles but can be used at any frequency up to 10,000 cycles.

The Freed series of Decade Capacitors covers a wide range of values and can be supplied as individual decades from 0.0001 mfd. per step to 1 mfd. per step or in various combinations of assembled decade boxes.

Single decade units can be assembled in different capacitor values for use in experimental and permanent equipment. The decade boxes are useful for laboratory work in bridge measurements and as components of filters and tuned circuits.

Polystyrene dielectric is used in the manufacture of the capacitor assemblies with the exception of the 1 mfd. per step unit which uses Mylar as a dielectric. All capacitors are non-inductively wound and heat treated for stability, low dielectric absorption and low losses.

Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately.

1350 Decade Capacitor

SPECIFICATIONS

Accuracy: Individual capacitors are adjusted to an accuracy of ±1% when measured at 1kc. The capacitance at the terminals, less the zero capacitance, is within ±1% of indicated dial setting. The zero capacitance of the decade boxes is supplied with each unit. Single decade units have a zero terminal capacity of approximately 8 mmfd. except Type 1419, which is compensated for true terminal capacity.

Dissipation Factor: The dissipation factor of the polystyrene units when measured at 1kc is less than 0.0002, the 1mfd. per step decade (Mylar) is less than 0.005.

Maximum Voltage: The maximum voltage that may be applied to these decades is 500 DC working volts.

Note: Individual capacitors can be supplied to better than ±1% Tolerance. Write for complete information.

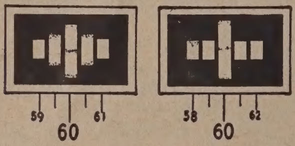
VIBRATING REED FREQUENCY METERS (PATENTED)

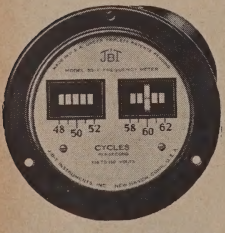
J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 18 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.



CAUTION: If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



(Meter operating at 60 cycles)

10 REEDS

Range: 48-52 and 58-62 cycles. Double window for ease of reading either range. Often specified for export. 100-130 volts; 130 ohms per volt; 1 watt power consumption. Accuracy ±0.3% at reference temperature. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

30-F, (illustrated). 48-52 and 58-62 cy., 3¼" Metal Case. **$30.50**

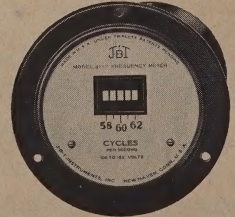
30-FX, 48-52 and 58-62 cy., 3½" Molded Case, MIL-M-6A mtg. **$27.50**

5 REEDS

Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds, 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds).

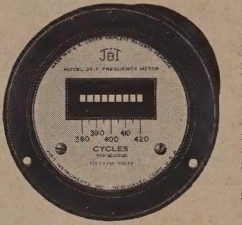
31-F, (illustrated). 58-62 cy., 3¼" Metal Case........ **$26.65**

31-FX, 58-62 cy., 3½" Molded Case, MIL-M-6A mtg...... **$23.65**



ADVANTAGES: Guaranteed accuracy at reference temperature of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

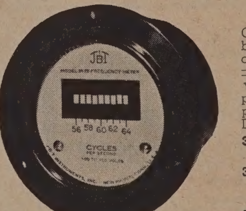


9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy ±0.3% at reference temperature. Nine reeds, 380-420 cycle range. 100-130 volts; 90 ohms per volt; 1.5 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

33-F, (illustrated). 380-420 cy., 3¼" Metal Case........ **$37.10**

33-FX, 380-420 cy., 3½" Molded Case, MIL-M-6A mtg...... **$34.10**



9 REEDS — 60 CY.

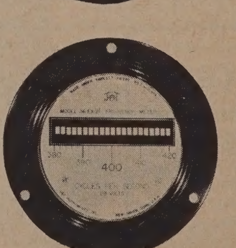
Covers a broad frequency band. Nine reeds, 56-64 cycles, or in half-cycle steps (accuracy ±0.2%) 58-62 cycles. 100-130 volts; 110 ohms per volt; 1 watt power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

34-F, 56-64 cy., 3¼" Metal Case, 1-cycle steps...... **$30.25**

34-FX, (illustrated). 56-64 cy., 3½" Molded Case, MIL-M-6A mtg. **$27.25**

34-F-Z, 58-62 cy., 3¼" Metal Case, ½-cycle steps.... **$31.90**

34-FX-Z, 58-62 cy., 3½" Molded Case, MIL-M-6A mtg...... **$28.90**



18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3½" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy ±0.3% at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

36-FX-21, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3½" Molded Case; 18 ohms per volt; 1.6 watts power consumption **$43.75**

36-FX-21-115, 380-420 cycles, 21 reeds, 100-130 volts; 90 ohms per volt; 1.5 watts power consumption........ **$45.00**

30-FX-18, (not illustrated). 46-54 and 56-64 cycles, 18 reeds in one window with two groupings, 100-130 volts; 210 ohms per volt; 0.7 watts power consumption. **$36.30**

Weighs only 4½ ozs.; 5 reeds; 500 ohms per volt; 0.25 watt power consumption. Also 116 to 124 cy.; 250 ohms per volt; 0.5 watt power consumption. 380 to 420 cy.; 170 ohms per volt; 0.7 watts power consumption. ELAPSED TIME — FREQUENCY METERS

31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red, all other numerals in black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption is 3.5 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

31-FE, 3¼" metal case..........**$33.00**

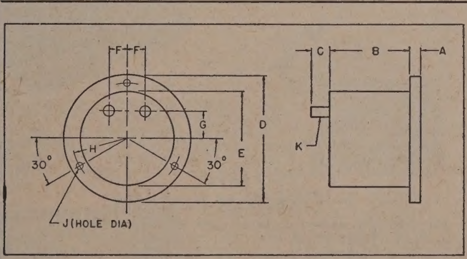
31-FEX-1, (per print SK-44—not regularly stocked) like Model 31-FE, except with 3½" metal flange permanently attached for MIL-M-6A front mounting per line 7, Table of Dimensions......**$34.10**

RUGGEDIZED METERS

Models with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters can be supplied, on special order, to the intent of MIL-M-10304A which covers ruggedization of other kinds of meters. This feature usually is specified only for extra severe shock and vibration.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

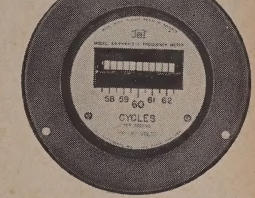
Among the non-catalog variations which J-B-T manufactures on special order, are 21-reed, 390-410 cycles in 3½" case; and 11-reed 780-820 cycles. Quotations on request.



NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3½" SEALED METERS



FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6A (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

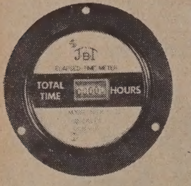
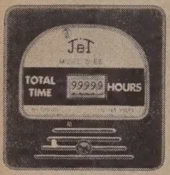
ELAPSED TIME METERS; 4" AND PORTABLE FREQUENCY METERS

ELAPSED (OR RUNNING) TIME METERS — 60 Cycles



MODEL 31-EX. To record operating time of AC electrical and electronic equipment, this self-starting synchronous instrument registers in 1/10th hour steps to 9,999.9 hours, then automatically re-sets. Shows tenths in red numerals, all others in black. Black molded case matches FX, 3½" frequency meters, and fully encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6A, also JAN-I-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2½", stud height above center (G) is zero, and all other measurements are as shown. J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. Types for 99,999 hours, or 50 cycles, or special voltages are available on special order.

31-EX, 60 cy., 110-125 volts **$15.95**
31-EX-200, 60 cy., 230 volts (not regularly stocked)........... **17.05**



MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. C showing standard rear mounting 2¼" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. Variations can be made for 99,999 hours (suffix U), 230 volts, minutes, matte finish, or 50 cycles.
31-ES, 60 cy., 110-125 volts.

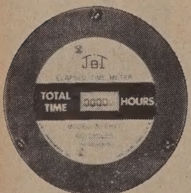
ELAPSED TIME METERS — Tenths of Minutes

MODEL 31-EXM, 60 cycles, 110-125 volts, reading 0-9,999.9 **minutes;** for short-run applications or readings at closer intervals than 31-EX. Tenths of minutes in red, minutes in black numerals, otherwise identical with 31-EX **$16.25**

3½" SEALED ELAPSED METERS — 60 Cycles



MODEL 31-EHXX. Where rugged requirements make a completely sealed elapsed time meter desirable, this glass-to-metal construction, with flat glass front and 3½" diameter separable flange, often is specified. Heavy-duty solder terminals are supplied. Every instrument is checked in a vacuum chamber. Overall dimensions and appearance match the FHXX series sealed frequency meters. Maximum voltage between terminals and case, 1000 volts, R.M.S. The meter registers in 1/10 hour steps to 9,999.9 hours, then automatically re-sets. Tenths indicator is in red, all others in black. Mount according to Print SK-85.
31-EHXX, 60 cy., 110-125 volts **$19.75**

2½" SEALED ELAPSED TIME METERS

MODEL 21-EHXX. This new 2½" sealed meter, with front mounting dimensions the same as Type MR-26 electrical indicating instruments in MIL-M-6A, nevertheless offers a full-size counter reading 0-9,999.9 hours in 1/10th hour steps and a rugged self-starting synchronous motor. Glass-to-metal seal makes the instrument completely tamper-proof. Ask for Print SK-68. A 2½" 400 cycle-meter, **Model 23-EHXX,** also is made on special order.
21-EHXX, 60 cy., 110-125 volts **$24.75**

⋙→ SEALED ELAPSED TIME METER — 400 Cycles ←⋘

MODEL 33-EHXX. Meeting a long-felt need for a stable 400-cycle elapsed time meter compact enough to fit in a 3½" flanged case, with all parts enclosed, is this new 400-cycle elapsed time meter. The instrument now is being produced only in sealed construction, glass-to-metal, with separable flange, heavy-duty solder terminals and flat glass front. External appearance matches FHXX series and Model 31-EHXX sealed, 60-cycle, elapsed time meter. A slightly larger case is used per SK-61.

OTHER REED PRODUCTS

Inquiries are invited on these new J-B-T products:

1. Reed Tachometers—Reading rpm by resonance alone—without any electrical circuitry or complicated mechanical connections—these instruments are held or mounted against the housing of turbines, electric shavers, vacuum cleaners, sewing machines or other motor-driven products. (Ask for Bulletin MT-458.)

2. Reed Relays—Reed-relays for selective frequency calling, or single-reed types for response to a single transmitted signal, such as 100 to 500 cycles, are made in plug-in cans. One type, a unique J-B-T construction with patent pending, eliminates vibrating contacts and substitutes a mechanism with exceptional efficiency which often eliminates need for further amplification. The device also can be added as a frequency-limit control on an indicating reed meter. (Ask for Bulletins 260-L and 160-R.)

3. Oscillator Controls—Plug-in reed-type oscillator controls to match transmitted frequencies to those picked up by vibrating reed relays can be supplied, for example, to operate in mobile or other communications equipment. (Ask for Bulletin 160-R.)

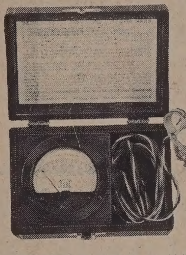
APPLIANCE TEMPERATURE TESTERS

OVEN TESTERS

MODEL 23-JP-1. This newest model indicating portable pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2⅜'' scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½'' x 2⅞'' x 4¼'' over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperature change inside the instrument itself, and gives foolproof direct readings. Supplied with attached SA-116 5½' calibrated thermocouple clip, and convection shield **$26.00**



MODEL 32-JP-3. This highly popular model uses a rigid outer carrying case 6'' x 3⅞'' x 3¾'', covered in black leatherette. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜'' scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116 5½' thermocouple, clip for attaching to grill and convection shield included..**$27.50**

MODEL 32-JP-4. Most versatile of the oven testers this model has all the features of the 32-JP-3 plus a leather carrying strap and binding posts for quick attachment or interchanging of various thermocouples, as listed, to check irons, washers, toasters, clothes dryers, etc. Range, 0-650°F with 2⅜'' scale arc; black leatherette case 6'' x 3⅞'' x 3¾''. Unattached SA-116 thermocouple is included. **$28.75**

NEW! DYNAMIC® OUTPUT TUBE TESTER MODEL 658

Makes more—and more accurate tests than any service tube tester ever made. Tests practically any tube the average serviceman will ever encounter. Faster, more versatile, the 658 is also ideal for laboratory and engineering applications.

DYNAMIC OUTPUT PRINCIPLE—Choice of 8 DC voltages applied to plate, screen, and VR tubes. Variable DC plus variable AC signal voltage applied to control grid. Meter reads only the AC component in the plate circuit. A much more valid test than mutual conductance because it considers the entire output curve of the tube, not just a small portion.

TESTS NEW 12-VOLT-PLATE HYBRID TUBES—Ample current capacity for even high current space charge grid tubes. The only tester made with this capability.

TRUE RECTIFIER TESTS—AC voltages are applied to diodes and rectifiers. Meter then reads rectified plate current—the true test for any rectifier. Easily handles high current rectifiers up to 250 ma.

GRID LEAKAGE TESTS—Highly sensitive test with direct leakage indication on special meter scale. Sensitivity of 15 megohms. Regular shorts test also included with three separate sensitivities to suit the type being tested.

TESTS "EYE" TUBES UNDER DYNAMIC CONDITIONS—You can open and close the eye to determine accurately its operating limits.

HEATER-CURRENT TEST FOR SERIES STRING TUBES—Actual current is read directly on meter scale.

HEATER CONTINUITY CHECK WITHOUT WARM-UP—No wasted time if the heater is open. Instant checks tells you immediately.

TEST VOLTAGE REGULATOR AND REFERENCE TUBES—Meter indication of the striking voltage and control voltage range for each type.

DYNAMIC® TUBE TESTER MODEL 648R

$129.95 net SHIPPING WEIGHT 22 LBS.

The world famous Jackson Dynamic tubes test principle exceeded in quality only by the Jackson 658 above. New, more convenient design puts all the tube sockets together, keeps roll-chart up and out of the way. Fast push-button sequence switching makes the set-up time less than the warm-up time of the tube. Completely flexible for new tubes. No panels to change, no cards to buy.

NEW TUBE SOCKET SUB-ASSEMBLY—All sockets grouped in one convenient subassembly. You can replace individual sockets or the entire subassembly easily.

ANGLED FULL-VIEW ROLL CHART—Super convenient zig-zag roll chart is now up higher, and out of the way. Complete chart assembly may be removed by taking out only one screw.

SILICON RECTIFIER—The 648R is ready the second you flip the switch.

23 SEPARATE HEATER VOLTAGES—The correct voltage for every receiving type—including series string tubes. From .75 to 100 volts.

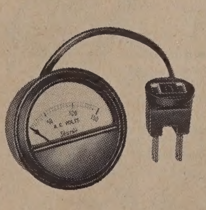
HANDY AC-DC LINE VOLTAGE TESTER



Stock 5406-LT—Here's how to use this highly popular line tester: push in the plug and read line voltage, then plug in the TV set, iron, toaster, washer, air-conditioner, or other appliance, and note the new reading. Find (and demonstrate) voltage drop or inadequate wiring as a major source of service problems with this compact, sturdily-built device. Cord is permanently attached to metal-cased meter which tests single outlets without accessories. Range 0-150 Volts. Standard package of 6 individually boxed meters includes attractive counter display at no extra charge. Per meter **$3.95**

IMPORTANT — HOW TO ORDER

For all standard models, give (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z) For DC meters, zero-adjusters are available only on Models 550, 950 and 850. For AC meters, zero adjusters are available on Model 850. When ordering, add Z to stock number. Example: Model 550-DC voltmeter, 0-1 volt range without zero adjuster is 5101. With zero adjuster, it is 5101Z. Add 35c to price.

PANEL CALIBRATION (S) Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S.

VISCOSITY DAMPING Careful application of new silicone compound on bearing surfaces damps pointer overtravel.

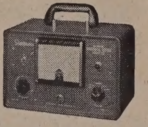
In-Circuit HORIZONTAL SYSTEM ANALYZER, Model 382



Model 382 is the world's most complete "testing package" for analyzing TV horizontal deflection systems. With this **one** instrument, you can:

(1) Check any winding in the horizontal system (transformer or yoke) for **shorts** and **opens.** Even one shorted turn is clearly indicated on a large 4½″ meter. Uses reliable, time-proven Q-type test.

(2) Check flyback and yoke **system** IN-CIRCUIT (disconnect only plate cap of output tube). High-Q systems are checked on a quick-reading, Good-Bad scale (most present day sets use the High-Q system); Low-Q systems on comparative logging scale.

(3) Measure capacitance value (and check for open capacitors) — direct-reading scales indicate from 10 mmf to 0.1 mfd — no bridge to balance. Measures capacitance to better than 10%.

(4) Make continuity checks of **any** wire-wound component, such as width coils, linearity coils, oscillator transformers; check capacitors for direct shorts. Can check many other components for Q, also.

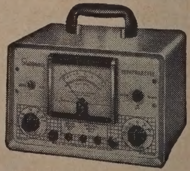
CAPACOHMETER
Model 383A
World's First IN-CIRCUIT
Capacitor Leakage Tester



The "Capacohmeter" combines in "one package" the flexibility to: (a) Measure leakage of defective paper, mica, or ceramic capacitors in ohms; (b) indicate directly the capacitance of good paper, mica, or ceramic capacitors over a range of 10.0 micromicrofarads to 10.0 microfarads; (c) detects many marginal capacitors by means of a pulse technique. All tests are read directly on a 4½″ instrument. No adjusting of a bridge circuit and balancing controls. All measurements made under load conditions. Borderline capacitors which cause costly "call backs" are immediately "knocked out" with the "pulse test." Many tests are made right "in circuit."

LF-1 TRANSIMULATOR®

SPEEDS DESIGN OF TRANSISTOR CIRCUITS BY ELIMINATING BREADBOARD LAYOUT

Bring transistor circuits to life in a matter of minutes with the Sprague LF-1 Transimulator. This new instrument lets you simulate any amplifier stage, a-c or direct-coupled, short of high power audio output; also multivibrator, switching, phasing, push-pull, Class A and B, and many others using cross-coupled Transimulators . . . whether the circuit is common or grounded emitter, base, or collector . . . whether the transistors are PNP, NPN, or Surface Barrier. You can simulate circuits stage-by-stage for cascade operation . . . or use a separate Transimulator for each stage to get simultaneous multistage operation.

Bring Circuit Diagrams To Life In Minutes

Everything you need for RC amplifier circuits is built right into the LF-1, including coupling capacitors . . . bias and load resistors . . . battery voltage supplies . . . Base Collector—Voltage Divider stabilization circuits . . . 5-way binding posts for transformer coupling and metering. Whether you're designing audio circuits or switching circuits, you'll get a true picture of operating parameters minutes after you've drawn the circuit diagram . . . without wasting valuable time with breadboard and soldering gun.

Pays For Itself In A Matter Of Weeks

An ideal laboratory instrument, Transimulators are inexpensive enough to justify several on every bench. You can even use the LF-1 to test transistors *in the circuit* . . . the only real proof of design parameters. And a complete step-by-step instruction manual makes operation fast, simple, and easy.

CAPACITANCE RANGE		ACCURACY			
Scale	Range of Scale	±2% ±1μμF	±3%	±5%	Reading Accuracy is the Determining Factor

C_5	45–2000μF		50–200	45–50	200–2000

- **CAPACITANCE BRIDGE** measures 1μμF to 2000μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming *any* low voltage capacitor during measurements.

- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurements at exact rated voltage.

- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μa to 600μa in seven ranges.

The Sprague TCA-1 is specifically designed to safely test capacitors such as tantalum capacitors, low-leakage aluminum electrolytic miniatures, low voltage ceramics and low voltage paper and film capacitors used in transistor and other low voltage circuits. No industrial laboratory or modern electronic service shop can afford to be without one!

MODEL TCA-1 ----------	**$197.50 net**

- **POWER FACTOR** measured by Wien bridge from 0 to 5 per cent.

- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.

- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.

- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.

- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three wire line cord grounds instrument case.

- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

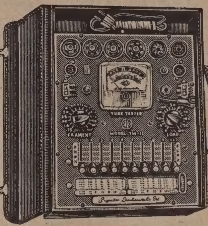
SUPERIOR'S NEW MODEL TW-11 STANDARD PROFESSIONAL

TUBE TESTER



★ Tests all tubes, including 4, 5, 6, 7, Octal, Lock-in, Hearing Aid, Thyratron, Miniatures, Sub-miniature, Novals, Sub-minars, Proximity fuse types, etc.

★ Uses the new self-cleaning Lever Action Switches for individual element testing. Because all elements are numbered according to pin-number in the RMA base numbering system, the user can instantly identify which element is under test. Tubes having tapped filaments and tubes with filaments terminating in more than one pin are truly tested with the Model TW-11 as any of the pins may be placed in the neutral position when necessary.

★ The Model TW-11 does not use any combination type sockets. Instead individual sockets are used for each type of tube. Thus it is impossible to damage a tube by inserting it in the wrong socket.

★ Free-moving built-in roll chart provides complete data for all tubes. All tube listings printed in large easy-to-read type.

NOISE TEST: Phono-jack on front panel for plugging in either phones or external amplifier will detect microphonic tubes or noise due to faulty elements and loose internal connections.

EXTRAORDINARY FEATURE

SEPARATE SCALE FOR LOW-CURRENT TUBES: Previously, on emission-type tube testers, it has been standard practice to use one scale for all tubes. As a result, the calibration for low-current types has been restricted to a small portion of the scale. The extra scale used here greatly simplifies testing of low-current types.

The Model TW-11 operates on 105-130 Volt 60 Cycles A.C. Comes housed in a beautiful hand-rubbed oak cabinet complete with portable cover. **$47.50**

SUPERIOR'S NEW MODEL 83

C.R.T. TESTER

Tests and Rejuvenates ALL PICTURE TUBES

CRT TUBE TESTER

ALL BLACK AND WHITE TUBES

From 50 degree to 110 degree types —from 8" to 30" types.

ALL COLOR TUBES

Test ALL picture tubes—in the carton—out of the carton—in the set!

Model 83 comes housed in handsome portable Saddle-Stitched Texon case—complete with sockets for all black and white tubes and all color tubes. Only **$38.50**

• Model 83 is not simply a rehashed black and white C.R.T. Tester with a color adapter added. Model 83 employs a new improved circuit designed specifically to test the older type black and white tubes, the newer type black and white tubes and all color picture tubes.

• Model 83 provides separate filament operating voltages for the older 6.3 types and the newer 8.4 types.

• Model 83 employs a 4" air-damped meter with quality and calibrated scales.

• Model 83 properly tests the red, green and blue sections of color tubes individually—for each section of a color tube contains its own filament, plate, grid and cathode.

• Model 83 will detect tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus. To test for such malfunction, you simply press the rej. switch of Model 83. If the tube is weakening, the meter reading will indicate the condition.

• Rejuvenation of picture tubes is not simply a matter of applying a high voltage to the filament. Such voltages improperly applied can strip the cathode of the oxide coating essential for proper emission. The Model 83 applies a selective low voltage uniformly to assure increased life with no danger of cathode damage.

- ✓ Leakage: To 5 Megohms
- ✓ 2 Capacity Ranges: .1 Mfd. to 1 Mfd. 1 Mfd. to 50 Mfd.

Ease of Operation

One of the problems facing the design engineer of a multi-service multi-range instrument is the need of easy switching from one service and range to another. Particular consideration was given to provide the maximum degree of convenience. For example, in the Model 73 **all** services requiring the use of test leads are accomplished with one of the leads **always** in the "common" jack. Actually, therefore, the Model 73 is a "one lead" tester since **the common lead is never moved** when switching from one service to another.

Voltage Measurements.

The voltage ranges of the Model 73 were carefully selected to provide **maximum utility** and **highest degree of accuracy at the most frequently used points.**

We claim maximum utility because in addition to the usual volt ranges we included a 30 volt range to accommodate the ever increasing use of 24 volt relay systems.

And regarding point of maximum accuracy . . . obviously the voltage measurement most frequently made is that of the line voltage. Since the standard line voltage can vary at different times of the day due to line loading from a low of 108 volts to a high of 125 volts, the 150 volt range of each Model 73 is calibrated against a laboratory standard at 120 volts. The 220 volt lines can vary from 208 volts to 235 volts. The 300 volt range of each Model 73 is therefore calibrated at the 225 volt point of the Model 73 meter scale.

Current Measurements.

With the exception only of extremely high current measurements required by the Utility Companies, the Model 73 affords every possible current measurement required for all around industrial use. It will accurately measure the fractional ampere used to actuate relays and contactors. It will measure the general current drain of most industrial devices (2 amperes to 20 amperes.) It will measure the current drawn by the massive heavy duty industrial motor (up to 60 amperes.)

Simultaneous Volt-Current Measurements.

It would be impractical to list all the ways in which this unique service can be employed. For example, the Air-Conditioning Installer will now be able to determine if a line is subject to excessive drop by using a simulated load (2 heating elements) and adjusting this "phantom" load to the equipment drain of the system to be installed. He can watch the effect on the voltmeter section while the ammeter section is reading the exact current drain. The Motor Repairman can measure the surge current drawn by a motor on starting, then the current drain on the steady run, and note at the same time the exact effect in the line voltage during both phases. The Electrical Contractor by recording the exact voltage fluctuations in relation to current drain can determine if a contemplated or existing line will adequately handle planned appliance loads. The Industrial Maintenance Man can now decide if a particular motor or device is affecting other equipment on the same line.

Capacity Measurements.

Capacitors (condensers) are used in power-factor corrective equipment; in noise eliminators; in motor starters; as arc suppressors across contact points and in many other industrial applications. The Model 73 will test and measure **all** capacitors from .1 Mfd. to 50 Mfd.

Resistance Measurements.

The resistance range is most frequently used to make a fast positive check for continuity. The Model 73 will of course do this effectively and in addition it will accurately measure the exact resistance of relay coils, field coils, motor starter windings and all common industrial ohmages.

Leakage Feature:

The Model 73 retains the reliable leakage system used in all our testers during the past 20 years. It consists of a neon working in conjunction with a resistance network and will indicate leakages up to 5 Megohms. This check will enable the Industrial Maintenance Man to make fast periodic checks of all equipment. In that manner he will have "advance notice" of potential short-circuits due to overheating, overloading, or accumulations of dirt and grease.

Model 73 comes complete in portable carrying case. Only................. $\$52^{50}$

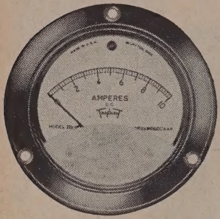
TRIPLETT INSTRUMENTS



RUGGEDIZED INSTRUMENTS

A complete line of 2½" and 3½" ruggedized and sealed instruments designed to meet government specification MIL-M-10304A.

Triplett ruggedized instruments employ the unique and exclusive bar-ring construction so well adapted to ruggedization, that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) constitute the essential difference between the commercial and ruggedized movements.

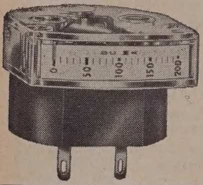
The bar-ring construction is inherently self-shielding so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness.

The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass.

Husky gasket-sealed studs are used for electrical connections to provide additional protection over delicate glass sealed types.

Most catalog ranges of DC: MV, Volts, Mic, Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10304A are supplied although special dials of all descriptions can be made up for special applications.

MINIATURE EDGEWISE PANEL METERS



If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2½" sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—D.C. 2% of full scale; A.C. Rectifier type 5% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only 9/16" x 1-11/16".

WESTON INSTRUMENTS

The newly expanded CROWN SERIES distinguished by handsome, functional design

Weston's Crown Line represents the ultimate in meter design, performance and readability. The series now includes a 4.5-inch group of D.C. instruments . . . both A.C. and D.C. types in the 2.5-inch group. Their striking cases will enhance the most modern panels or electronic equipment.

Scales are exceptionally long for the case diameters: 5.3 inches for the 4.5-inch models, up to 2.5 inches for the 2.5-inch models. Ballistic characteristics are greatly improved.

Clear plastic covers and exceptionally long scales afford unmatched readability, with excellent natural illumination from top, front and sides. Confusing shadows are eliminated. In poorly lighted areas, one bulb mounted above the instrument furnishes adequate illumination. The neutral tone of the multi-prism front is designed to complement test equipment or panels of any color. CORMAG® mechanisms eliminate the need for external shielding; they can be closely grouped on magnetic or nonmagnetic panels without special adjustments or danger of intereffects.

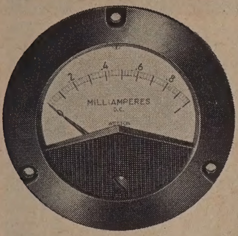
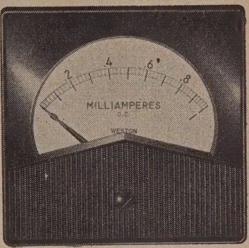
WESTON INSTRUMENTS



201/301
PANEL INSTRUMENT SERIES



The Weston 301 Line—famous and trusted throughout industry for many years—has undergone important changes. The 3½-inch instruments look different, are more versatile, work better and longer. And now a sister line of 2½-inch instruments has been introduced—the 201 Group—matching the 301 instruments in appearance and incorporating the same new features.

The renowned Weston CORMAG® mechanism is now standard equipment . . . permits mounting on magnetic or nonmagnetic panels, close to other instruments, without special adjustments. It makes the "301" and "201" immune to the effects of stray magnetic fields. Ballistic characteristics are improved; even critical damping can be obtained. New, modernistically styled Bakelite cases—round or rectangular—are standard. These cases are interchangeable for A.C. and D.C. models.

MARK II ANALYZER

Weston Analyzer
MODEL 980
COMMON

Model 980 Mark II

Price $44.50

Combination protective front cover and tilt stand $5.50

The new thin-line Mark II is a highly sensitive and extremely rugged volt-ohm-milliammeter designed for a wide range of accurate test measurements in the electronic field.

Famous CORMAG® mechanism protects the instrument against false readings due to magnetic disturbances. Electrostatic shielding assures accurate measurements at high d-c voltages. Fuses in the low ohmmeter circuits prevent burnout if voltages are mistakenly applied. Interchangeable parts eliminate all need for parts selection in the event replacements are ever necessary. The breakproof case will withstand dropping and thus eliminate the major source of repair and maintenance costs.

FEATURES

- Modern Thin-Line Design
- Spring Back Jewels for Maximum Shock Resistance
- Fused Resistance Ranges
- Transit Switch Position to Dampen Movement During Transportation
- Fully Insulated Crackproof Case
- Single Selector Knob for all Functions and Ranges
- Wide Angle Scale for Maximum Visibility
- Precision Components—No Parts Selection Required
- Single Board Etched Wiring Circuit for Easy Maintenance
- Static Shielded for Accurate High Voltage Measurement
- 4-Way Combination Tilt Stand and Protective Cover Available

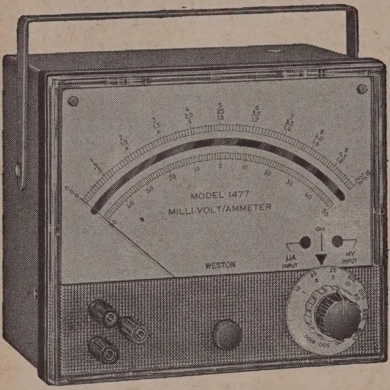
MODEL 1477 ELECTRONIC MILLI-VOLT/AMMETER

This versatile Electronic Milli-Volt/Ammeter provides in a single, compact, light-weight unit measurement and amplification of a wide span of d-c current and voltage ranges. The Weston Model 1477 uses a unique electronic servo-amplifier whose extreme high gain, coupled with full feedback, provides accuracy and stability without the adverse affects resulting from variations of line voltage or frequency, condition of amplifier tubes or other variables.

No mechanical switches or choppers are used. The device is a true d-c meter with zero-drift comparable to a typical permanent magnet moving coil instrument. It offers the advantage of essentially zero power-drain from the source being measured, and combines this with power-gain sufficient to supply 1 ma output to drive its own indicating meter, and any external load of 5000 ohms or less. The power output is available at terminals in the back of the unit.

The indicating instrument, incorporating the famous Weston self-shielded CORMAG® mechanism which permits its use in close proximity to magnetic fields without affecting accuracy, knife-edge pointer and mirror scale, all combine to provide dependable performance and unmatched visibility.



- Calibration is dependent only on precision resistors in the range standard.
- No tube selection is necessary when replacements are needed.
- Neither input or output need be grounded, but if grounding is desired, either side or some intermediate point can be grounded. Output polarity may be selected at will.
- Since zero-drift is dependent only on position of galvanometer coil, long-time drift can be maintained to less than 2 microvolts after a few minutes warm-up time.
- Gain stability and output linearity are both within 0.1% at ranges above 1 mv or 200 μa.
- Resolution capability is within 2 microvolts or .02 microamperes.
- Adjustable to zero-left or zero-center.

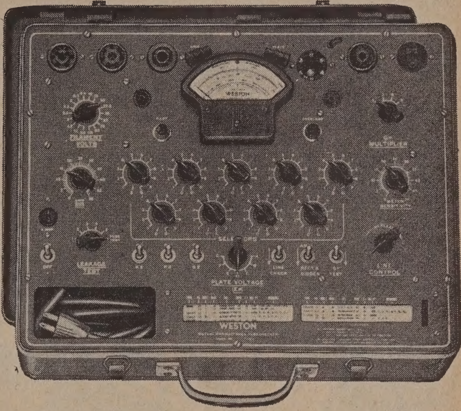
WESTON MODEL 981 PROPORTIONAL MUTUAL CONDUCTANCE TUBECHECKER



FEATURES

METER MEASUREMENT OF HIGH LEAKAGE RESISTANCE: Provides an accurate meter measurement of leakage resistance as high as 5 megohms between tube elements, thus being particularly useful for TV servicing and TV line production assembly.

MULTIPLE SWITCHING FACILITIES: Protection against obsolescence is assured through the use of nine single circuit, twelve position, selector switches.

TWIN SECTION TUBES: Three toggle switches make it possible to rapidly check and compare the respective sections of twin section tubes at only one setting of the selector switches.

SINGLE SOCKET FOR EACH TUBE BASE REGARDLESS OF TUBE CONNECTION: Eliminates the possibility of plugging a tube into the wrong socket.

Gm MEASUREMENTS: Gm measurements are made more accurately by using filtered d-c plate, screen grid and control grid potentials. A precision voltage divider network and selector switch allows a proportionate value of signal voltage to be chosen for testing tubes having transconductances up to 30,000 micromhos. Signal voltages of 5.2, 2.6, 1.3, and 0.65 volts peak-to-peak having a frequency of 5000 cycles are provided.

ROLL INDEX CHART—A complete listing of tube test data is available at the flick of a finger by means of an easy-to-read, built-in roll chart.

LEAKAGE TEST: The leakage tests are performed at a d-c potential of 125 volts. For each numbered position of the LEAKAGE TEST switch, a specific tube element is isolated and connected into a series ohmmeter circuit consisting of the isolated element, the 125 volt d-c potential, a current limiting resistor, a milliammeter, and all other elements of the tube.

VOLTAGE REGULATOR TUBES: A selenium rectifier supply furnishes 200 volts d-c for testing of voltage regulator tubes.

SUBMINIATURE TYPE TUBES: A 45 volt potential source facilitates testing of subminiature tubes.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

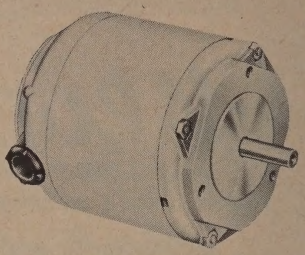
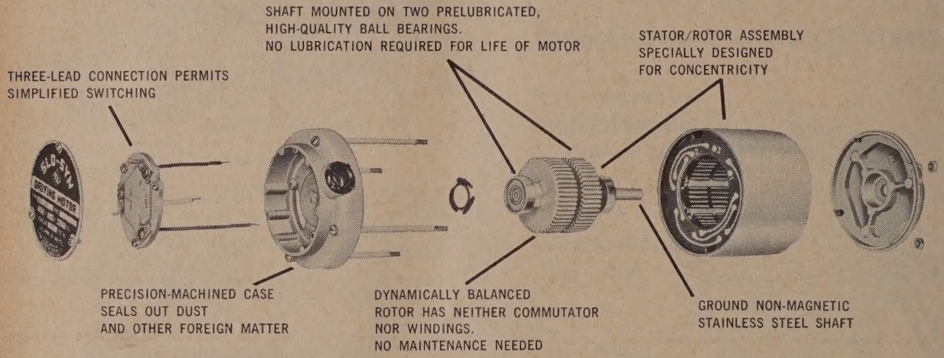
SLO-SYN® *Synchronous Motors*

- **INSTANT STARTING, STOPPING, REVERSING**
- **CAN BE USED AS D-C STEPPING MOTORS**
- **72 RPM SHAFT SPEED WITHOUT GEARS**
- **START AT FULL RATED TORQUE**

A SLO-SYN is a synchronous permanent magnet type motor having instant start, stop and reverse characteristics and a basic shaft speed of 72 RPM with 60 cycles applied. Although used extensively as a constant speed a-c motor, its use as a d-c stepping or incremental positioning device offers control system designers, machine tool and process control engineers unlimited application possibilities. It is compact and economical, has almost negligible overshoot, no ratchets or detents. A single-pole, three-position switch can give complete forward, reverse and "off" control because the motor has three leads only. Starts or stops in less than 0.025 seconds or approximately 1.5 cycles. There is no need for electrical or mechanical braking because it will stop in less than 5° of motor shaft rotation. The starting and operating currents are nearly identical and there is no excessive inrush current when the motor is turned on. All types have a ⅜" diameter shaft. Quiet-running, maintenance-free motor.



TYPES SS150, SS150M, SS152, SS250



SHAFT MOUNTED ON TWO PRELUBRICATED, HIGH-QUALITY BALL BEARINGS. NO LUBRICATION REQUIRED FOR LIFE OF MOTOR
STATOR/ROTOR ASSEMBLY SPECIALLY DESIGNED FOR CONCENTRICITY

PRECISION-MACHINED CASE SEALS OUT DUST AND OTHER FOREIGN MATTER
DYNAMICALLY BALANCED ROTOR HAS NEITHER COMMUTATOR NOR WINDINGS. NO MAINTENANCE NEEDED
GROUND NON-MAGNETIC STAINLESS STEEL SHAFT

Types SS150 and SS152

SLO-SYN types SS150 and SS152 are designed for 150 ounce-inch duty. Types are available also with a resistor and a capacitor integrally mounted in an enclosure on the end of the motor (suffix RC when ordering). Use Class A insulation, rated for 50° C temperature rise from 40° C maximum ambient under continuous duty.

Militarized Type SS150M

SLO-SYN type SS150M has a rating of 150 ounce-inches and is designed to meet or exceed applicable military specifications regarding materials (CCM-636-A), shock (MIL-T-17113), vibration, salt spray, humidity, and temperature (MIL-E-4970A). Used as a driving motor for beacons, searchlights, radar antennas and similar applications.

TYPE SS250

SLO-SYN type SS250 has a torque rating of 250 ounce-inches and is designed primarily for heavier duty applications. Its high torque makes it particularly well-adapted for duty as a prime mover for controlling valves, machine tool carriages and similar applications. Uses Class B insulation and is rated for 75° C temperature rise from 40° C maximum ambient under continuous duty.

. . . PLANETARY GEAR TYPES

Standard types having specially-designed planetary gear assemblies are available. The speed reduction assembly, is completely enclosed in a dust proof housing mounted on the shaft end of the motor. The load is evenly distributed over three nylon gears thereby reducing the possibility of tooth damage. The self-lubricated nylon gears provide quiet operation and long life. The planetary gear shaft is ball bearing mounted. When ordering, the basic type number must be suffixed with the desired planetary gear assembly number. For example, type SS50-P1.

. . . AS A D-C STEPPING MOTOR

When used as an incremental positioning device, one revolution of the motor shaft can be divided into 200 precise increments through the use of a d-c power source and a suitable switching arrangement. The motor will advance 1.8° for each change in polarity if the d-c voltage applied to the windings is switched according to the sequence shown in the chart. OMNIDIRECTIONAL PLASTIC DOME

EASY LAMP REPLACEMENT: All assemblies (whether for front or rear insertion) have this important feature: The plastic domes or metal caps are easily removed from front of panel — thus making the lamps accessible for easy lamp replacement. Please refer to our Form L-156D which describes these units in detail.

PLASTIC DOME — OMNIDIRECTIONAL: The unique "stovepipe" lens, moulded of high heat plastic, radiates light in all directions. Heavy plastic walls are reinforced by threaded brass insert. This fitting receives lamp well up into plastic dome for maximum light dispersion.

LENS WITH MESSAGE — easily positioned. A DIALCO feature is the specially designed cap-and-lens (as shown at right). By pressing on spring-mounted lens and rotating in either direction the legends may be positioned *after* installation of the assembly.

INSULATED: Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached.

FINISH: Black nickel . . . *TERMINALS*: Soldering or Taper-Tab.

◆Now also available—units for mounting in 15/32″ clearance hole.

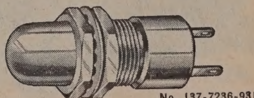
SUB-MINIATURE

Use tiny T-2 G.E. Glow Lamps



No. 137-7236-931

NE-2D or NE-2J*

This series houses newly improved lamps with formed bulbs and midget flanged bases. Lamps are designated as *NE-2D* for the regular lamp, and as *NE-2J* for the high brightness type which may be operated at high current. The *NE-2J* has higher voltage characteristics requiring 110V. A.C. or 160V. D.C. for reliable performance . . . a resistor (or other ballast device) must be used to limit the lamp current. Since the current is never more than 3 milliamperes, the resistor may be the small 1/3 watt type . . . All assemblies have 2 terminals (*Soldering or Taper-Tab*); conform to applicable Mil. Specs. . . . *For full details, ask for Brochures L-159B and L-162.*

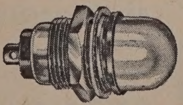
*New HIGH BRIGHTNESS lamp.

OTHER NEW SUB-MINIATURES

The DIALCO line is constantly expanding. New Series include Neon Sub-Miniatures MS25257 with built-in 62K Resistor (patented); also watertight units, etc. Request latest brochures.

Also ONE terminal units

For use on grounded circuits



DIALCO also makes a complete line of *single terminal sub-miniature pilot lights* intended for use where it is desired to ground one side of circuit. Available in the styles similar to the above. Instead of the single soldering terminal, a binding screw terminal may be specified. Brochure L-157B describes these units in detail.

ORDER COMPLETE WITH LAMPS so that you will be assured of receiving the pilot lights and correct lamps at one time, ready for immediate use.

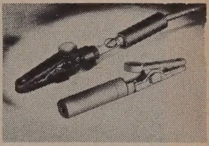
SAFE-T-KLIP

(U. S. Patent 2,754,490)



New convenience and safety through use of 100% insulated test clips. Nylon insulation covers entire clip, including nose, without bulky rubber boots or insulating tape. Danger of short circuit from clips touching each other or other components is eliminated. Test leads may be changed from one connection to another without cutting off power.

Tough nylon insulation can't loosen or come off, provides positive permanent protection in excess of 600 volts. Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip ⅜″ wide, ⅝″ high.

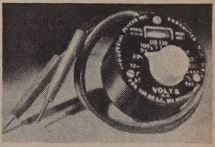
MINI-VOLT VOLTMETER

(U.S. Patent 2,644,134)



MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, appliance servicemen, lab technicians, handymen.

Used to identify AC or DC lines, check rectifiers, filter capacitor, chokes; tests for blown fuses, grounded components, DC polarity; measures voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately ½-megohm, draws negligible current—ideal for electronic apparatus.

Glow lamp guaranteed for 25,000 hours operation. Furnished complete with extra heavy insulated 12-inch flexible test leads and test prods.

Lightweight, thoroughly insulated, and so rugged that instrument can be thrown into tool box or dropped to floor without damage. C.S.A. approval #8910.

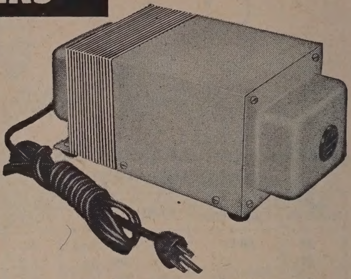
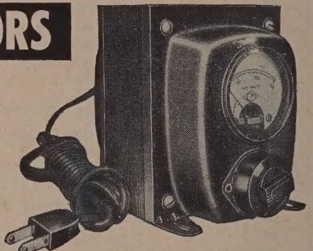
AUTOMATIC VOLTAGE STABILIZERS



This automatic voltage stabilizer has been specifically engineered to provide the necessary stabilization for television receivers up to 24". It is provided with a primary cord and plug for connection to any convenient 115/120 volt, 60 cycle circuit. A built-in receptacle accommodates connection for the TV set. This unit functions only when TV set is turned on. When set is not in use, a built-in relay disconnects primary circuit thus stopping coil magnetism. Operation is noiseless and completely automatic. Voltage fluctuation from 95 to 130 volts is automatically adjusted to stabilized 118 volts ±2% within 1/30th second.

Output capacity 200 VA
Length 11½"; width 5⅜"; height 5¼"
Weight 22 lbs

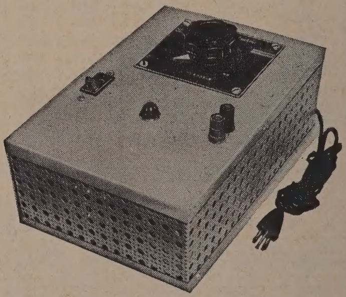
MANUAL TYPE VOLTAGE ADJUSTORS



The type 8394 M voltage adjustor is ideal for applications where a below normal or above normal voltage exists for relatively long periods of time each day Essentially this is a tapped winding transformer with four below normal voltage contacts and two above normal voltage contacts, to provide voltage correction over a range from 95 to 125 volts. Unit is furnished complete with cord and plug for connection to available circuit, built-in secondary receptacle and includes voltmeter and regulating switch.

Capacity 300 VA
Height 4¾"; width 4"; depth 5"
Weight 5 lbs.

D.C. POWER SUPPLY

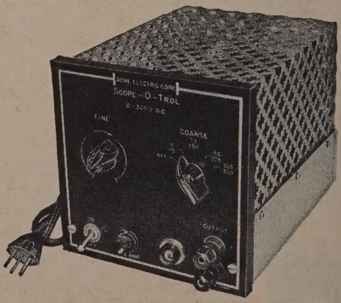


The type PS 6757 is a compact portable instrument that supplies a stabilized direct current, adjustable from 0/45 volts. It is ideal for use in transistor testing, circuit testing, to provide regulated voltage for light testing. Used in place of battery stacks, it provides a dependable direct current source of supply.

Supplied with grounded cord and plug set to connect to any convenient 60 cycle, 95/130 volt circuit. Filtered direct current output range from 0 to 45 volts, 0/2.5 amperes is continuously adjustable and stabilized ±1% at any setting regardless of alternating current fluctuation. Voltage regulation 5% between full load and no-load at full voltage setting.

Portable Model PS 6757
11½" x 7¾" x 4". Weight 23 lbs.
Rack Model PS 1-6757
19" x 5¼" x 7½". Weight 21 lbs.

SCOPE-O-TROL



This is a DC voltage reference supply particularly useful in oscilloscope analysis. It provides an opposing potential which cancels out the direct current increment of a circuit being checked, so that both DC and AC steady state voltages may be observed on the scope in their true form.

This instrument completely eliminates the common method of stacking batteries in various combinations thus completely avoiding the spurious response and great variations frequently resulting from instability of battery output.

Supplied with primary grounded cord and plug for connection to any 115 volt 60 cycle AC circuit. Regulated output range from 0 to 300 volts DC is stabilized at any desired setting. Coarse adjustment is in 75 volt steps. Fine adjustment potentiometer .25/degree. Ripple is less than 1 millivolt RMS. Current limiting and short circuit protection are inherent features.

Scope-O-Trol type PS-31510

Input 115 volts, 60 cycle. Output 0-300 volts DC

ATR EMERGENCY LIGHTING AND POWER UNITS

Completely Automatic Standby-Power Units Specially Designed to Permit the Instantaneous Continued Operation of Critical Lighting Equipment, PA Systems, Amplifiers, Intercom Systems, Burglar Alarms, Fire Alarms, Synchronous Electric Clocks, Electric Time and Recording Clocks, Incubators, Gas Valves, Telephone and Test Equipment, and Similar Critical Devices in the Event of 115 Volt AC Commercial Power Line Failure. For Use: In Hospitals, Banks, Hotels, Theatres, Factories, Office Buildings, Schools, Homes, and Many Other Areas of Operation.

ATR Emergency Lighting and Power Units are actually a combination of an ATR Inverter, automatic Battery Charger, and transfer panel. These Emergency Standby-Power Units are especially recommended for applications as mentioned above and feature RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector. ATR Emergency Lighting and Power Units provide instantaneous operation of the equipment being protected, within approximately 1/20th of a second. They are designed for quiet long life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in type Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for the power load being protected. These Inverters are recommended for use only with loads having power factors in excess of 70%. Additional external power factor correction is required in order to operate lower power factor loads as low as 50%.

The ATR Charger portion is completely automatic and will maintain the storage battery at full charge, with minimum gassing, from regular 115-volt AC 60 cycle power line. In the event of power line failure, the storage battery, which has been kept fully charged for this purpose from the regular power line, is connected automatically to the lamps, or to the Inverter, or both. The Inverter then supplies power automatically to the load being protected. When the commercial power is restored, the transfer unit automatically switches the "protected load" to commercial power and turns the Inverter and lights off. At this point, depending on the state of charge of the battery, the battery charger will deliver approximately 6-3 amperes to a 6-volt battery (or less to a 12-volt battery) for fast recharging. As soon as battery reaches full charge, the charger will automatically switch to a trickle charge of 100-150 milliamperes (adjustable) to maintain this full charge.

ATR UNIVERSAL INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorder, Television Set, Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

ATR

Electronic Tube PROTECTOR

Specially Designed To Protect ALL Electronic Tubes in TV or Hi-Fi Sets, Amplifiers, and Similar Electronic Equipment. Will Double or Triple Tube Life Including Picture Tubes.

EASY TO OPERATE

ATR Electronic Tube Protectors should double or triple the life of all electronic tubes including picture tube in TV or Hi-Fi Sets, Amplifiers, Electronic Organs, and other similar electronic equipment. The ATR Electronic Tube Protector utilizes a thermal cushion-action principle which also protects all other components by eliminating initial damaging surge currents. The ATR Electronic Tube Protector can be used with any electronic equipment having input wattage of 100 to 300 watts. The Electronic Tube Protector plugs into the AC wall socket; whereas, the TV or Hi-Fi Set then plugs into the tube protector receptacle. There will usually be a few seconds thermal cushion-action delay from the instant TV set is turned on to time of normal tube brilliancy due to action of Tube Protector.

2. All models are housed in cases of similar design and appearance. The class designations signify approximate size and weight as follows:

Class	Size	Weight
SP — Shaver Pack	2⅝ x 2½ x 3 7/32	2 lbs.
LM — Light Midget	3 x 3½ x 4 13/16	4 lbs.
M — Midget	3 15/16 x 4⅝ x 5 11/16	6 lbs.

MALLORY
VIBRATOR
FOR USE ON
6 VOLT BATTERY

Mallory Vibrators are assembled from carefully matched materials built to extremely close tolerances, assuring perfect balance and precise operation. Crude rubber insulation and heavy cans effectively deaden sound and vibration. Every Mallory vibrator is tested for output, starting voltage and wave form. If Mallory type number is not known refer to diagram at right or write for **VIBRATOR GUIDE, 15c** FREE when request is included with order for Mallory Vibrators.

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from AC line. Highly advanced Ohmite design offers: Greater current capacity for equivalent size (in VT2 and VT4 sizes) **plus a sizable bonus in current in all units where output greater than line volts** ("overvoltage") **is not required** ("N" suffix); positive current transfer achieved with direct brush to slip spring shunt; rhodium plated brush track. **Mounting:** VT2 panel mounting by $\frac{3}{8}$-32 bushing; VT2 tandem units by $\frac{1}{4}$-20 bolts; all VT4 and VT8 types panel or table mounting by $\frac{1}{4}$-20 bolts—shaft slides to brush or base side. Adapter plate available for 4-hole mounting of single VT4, Stock No. 6512. Units not cased except where indicated. Frequency 60 to 400 cps except *50 to 400. Over-all dimensions include shaft. Suffixes "-2" and "-3" indicate number of units in tandem assembly (shipped with connection instructions). Cased units as follows: VT2E, VT4E, VT8E—fixed mounting, in-conduit-line; VT2F, VT4F, VT8F—portable with switch, outlet, fuse; VT8G—portable with overvoltage—no-overvoltage switch, outlet, circuit breaker, adjustable handle (not included in dimension).

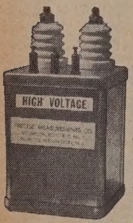
For additional built-in current meter (both meters are 3 inch size), including automatic meter protector circuit, add $35.00 to any power supply.

PACKAGED POWER SUPPLIES



These conveniently packaged power units will be found ideal for applications requiring minimum size and weight. Features isolated high voltage terminals permitting either the positive or negative side to be grounded. Rectifier tubes are operated from separate filament transformers so that DC output voltage can be varied from zero to full rated value. Selenium rectifier types have extra cells to assure operation under high line voltage or light loading. All standard units have well filtered DC output. Power packs with AC output available on order.

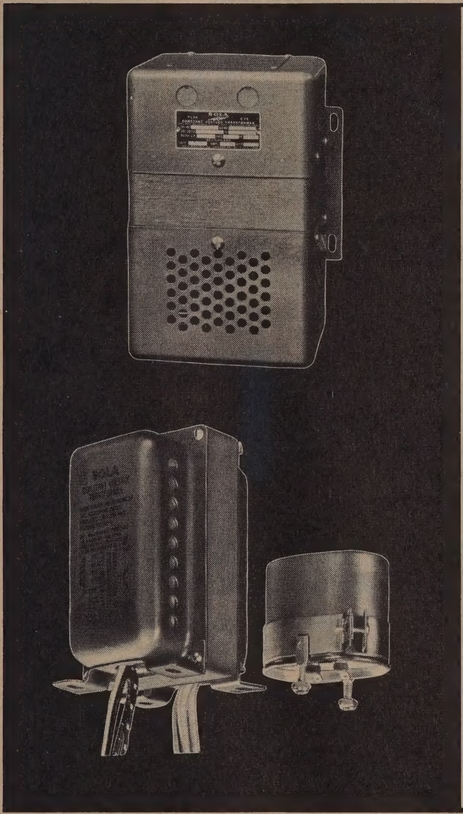
SOLA

Constant Voltage Transformers

automatic, instantaneous voltage regulators



Sola Constant Voltage Transformers are static-magnetic voltage regulators. They are designed to provide a stabilized output voltage even though the input voltage varies over a considerable range. They have nine distinct advantages over electronic-type regulators or regulators which depend solely upon saturation of core materials for their regulating action:

1. Ultra-fast regulating action. Response time is usually 1.5 cycles or less.
2. Absence of moving or renewable parts or manual adjustment eliminates need for routine maintenance and spare parts stock.
3. Completely automatic, continuous regulation. No manual adjustments are required.
4. Self-protecting against short circuits on output or load circuit.
5. Current-limiting characteristic protects load equipment from fault currents.
6. Availability of transformer ratio for step-up, step-down, plate and/or filament supply permits substitution in place of conventional, non-regulating transformers.
7. Relatively compact compared to other equipment for comparable regulation.
8. High degree of isolation between input and output circuits.
9. Negligible external field.

Sola static-magnetic transformers are supplied for a number of voltage-regulating requirements. They supply constant voltage in nominal line values, in filament and combination plate-and-filament values, and in variable voltage outputs.

The following pages list the widest range of stock ratings and types offered by any manufacturer of static-magnetic voltage regulators.

Standard Sinusoidal Type (CVS)

for built-in component or accessory use

SOLA

Sola Standard Sinusoidal Constant Voltage Transformers regulate voltage within ±1% regardless of input voltage variations as great as ±15%. Displaying fast regulating action, their response time is usually 1.5 cycles or less. With less than 3% total rms harmonic content in their output voltage wave, they are particularly suitable for use with rectifiers or other equipment which is sensitive to, or is affected by, harmonics in the supply voltage. Nine stock ratings are listed. Special designs are available in production quantities.

Normal-Harmonic Type (CVN)

±1% regulated voltage for electrical and electronic equipment

These units provide the same ±1% regulation as the standard sinusoidal models above. They have an average of 14% total rms harmonic content in their output voltage. Along with the sinusoidal type, they offer simplicity, reliability and freedom from maintenance. They are reliable sources of voltage for most electrical loads such as filaments, relays, solenoids, other transformers serving ac loads — in fact, all loads not affected by harmonics in the supply voltage. This series includes those mechanical designs specially engineered for use as built-in components. Special designs are available in production quantities.

Electronic Power Type

±1% regulation for filament voltage; ±3% regulation of plate-filament supply

Sola Electronic Power Type Constant Voltage Transformers are designed as components for simple assembly into electronic manufacturers' own product. The filament type provides 6.0 or 6.3 volts output, regulated within ±1% over line voltage variations as great as ±15%. The combination plate-and-filament type provides voltage regulated within ±3% for line voltages varying up to ±15%. Both types provide filaments with stabilized voltage supply, and thus contribute to reliable operation, long life, and reduced service expense for load equipment. Thirteen stock units are listed. Special designs available in production quantities.

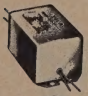
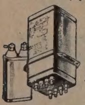
**Voltage values are taken at output of 5Y3GT rectifier for No. 7104 and No. 7106 transformers and at output of 5U4GA-GB for No. 7107. Guaranteed regulation of ±3% on plate voltage output is contingent on the use of Sola-regulated 5.0v filament supply winding for the rectifier tube.*

* Mechanical structures

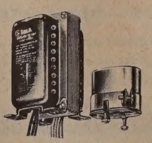
"Structure code" letter refers to one of these general types of mechanical assemblies:



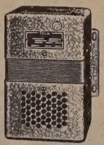
D—Drawn case; integral capacitor unit; flex leads.



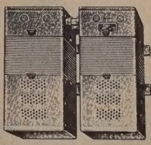
S—Hermetically-sealed case; separate capacitor; solder lugs.



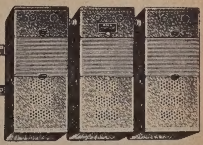
E—Exposed core; end bells; separate capacitor; flex leads.



W—Exposed core; end housings; screw-type terminals in outlet box.



Y—Same as W, but duplex assembly.



Z—Same as W, but triplex assembly.

Cord/receptacle adapter kits

Adapter kits may be used when the convenience of input plug and output receptacle is preferred to the standard arrangement of terminals in the transformer housing. Kits are available for most transformers with ratings from 30 to 500va and are supplied at slight additional cost. Kits permit use of 2 and 3-wire input and have 2 and 3-wire output receptacles as well as output jacks. Cords and receptacles are designed for 118-volt nominal service only.

Sola DC power supplies: compact, regulated, for high-amp loads

This combination of a special Sola Constant Voltage Transformer, semi-conductor rectifier, and high-capacitance filter yields a dc power supply compact in size, low in weight, and with other important advantages.

1. Output regulation of ±1% or less with ±10% line voltage variations.
2. Minimum output voltage change with wide, rapid load changes.
3. Low input power, with resultant good efficiency.
4. Ability to withstand high, short-time overloads without damage to components.
5. Ripple voltage of approximately 1% (rms) or less.
6. High overall economy by eliminating overload capacity needed in other types of power supplies for certain applications.
7. Low ratio of size and weight to power output.
8. Freedom from routine adjustment and maintenance.
9. Exceedingly low output impedance.

In addition to its important function of correcting line voltage variations, the Sola CV's inherent current-limiting action permits safe, economical use of the efficient semi-conductor rectifier with its low forward voltage drop and other advantages. This same current-limiting action also permits use of high-capacitance filter sections by controlling excessive charging currents which might damage rectifier junctions. The high-capacitance filter yields very low ripple voltage without need for heavy, bulky choke components, with their substantial and often-varying load voltage drops.

H-C SERIES

POWERSTAT® Variable Transformers

POWERSTAT variable transformers of the H-C Series feature a completely new concept in variable transformer design. They introduce patented re-entry rings which permit extremely fine voltage adjustment (less than 0.17 volt per division) of the input voltage. Because of the new helical-wound coil design, the low-resistance brushes are always in contact with only one turn of the coil. Efficiency and current capacities are much higher than previously available in variable transformers. Size per KVA is relatively small. Well-suited for high current applications requiring cool, efficient operation. The design is a unique and exclusive POWERSTAT development covered by U.S. Patent No's. 2,864,992 and 2,896,179.

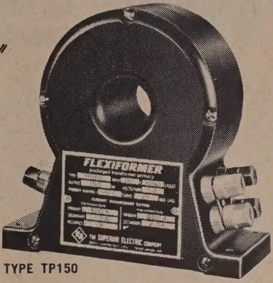
FLEXIFORMER® *Packaged Transformer Primary*

A
"*Do-it-yourself*"
TRANSFORMER

- A MULTIPLE SOURCE OF A-C VOLTAGES
- A CURRENT TRANSFORMER



TYPE TP150

This "do-it-yourself" transformer is a self-contained toroidal primary coil complete with SUPERIOR 5-WAY Binding Posts for connections. The binding posts are colored for relative polarity identification. The primary consists of a strip-wound silicon steel core having a coil of 400 turns of #24 B&S gauge copper wire. When used as a source of a-c voltage, the center opening permits hand threading the proper number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding becomes the secondary winding with the current induced by a wire passing through the center opening.

. . . AS A CURRENT TRANSFORMER

FLEXIFORMER type TP150 becomes the secondary winding when used as a current transformer. A current carrying conductor passing through the center opening serves as the primary. When used with a 0-1 ampere ammeter, currents up to 400 amperes can be measured with an accuracy of 1% at 60 cycles. Can be portable or fastened permanently in place.

. . . AS A SOURCE OF A-C VOLTAGE

FLEXIFORMER type TP150 has an input rating of 120 volts, 50/60 cycles single phase and an output rating of 150 VA. The voltage of the secondary is proportional to the number of turns hand wound through the center opening. The correct number of turns is determined by dividing the desired output voltage (plus approximately 25%) by 0.3.

Can be used as either a variable low voltage supply or as a line corrector. Essentially consists of three POWERSTAT variable transformers individually connected to three buck-boost fixed-ratio transformers. SUPERIOR 5-WAY binding posts with jumpers are provided and arranged so that outputs can be inserted in the line or removed as desired. The output voltage adjustments can be made in any combination or individually as desired.

EXEL

Loading Reactor

Type LR2

120 volts, 60 cycles
2.0 amperes at 120 volts
Inductive reactance 60 ohms
D-C resistance 4.0 ohms
Inductance 0.16 henrys

Designed to provide a convenient inductive load which can be made adjustable when used in conjunction with a POWERSTAT variable transformer. Used primarily for testing apparatus at various lagging power factors, i.e., to simulate an inductive load. Essentially consists of a gapped, strip-wound silicon steel toroid core, wire-wound and imbedded in epoxy compound. Entire assembly enclosed in a self-contained, durable, high grade phenolic case having two SUPERIOR 5-WAY binding posts for connections. At 60 cycles, the EXEL has essentially a linear current curve from 0 to nominal 2.0 amperes for continuous duty and up to 3.0 amperes for intermittent duty.

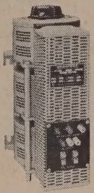
A-C/D-C Power Supply



Type V4050-3

A-C INPUT:	240 v., 50/60 cycles, 3-phase (Primary delta connected) 480 v., 50/60 cycles, 3-phase (Primary wye connected)
A-C OUTPUT:	0-25 v., 40 amps., 3-phase (Secondary delta connected) 0-50 v., 25 amps., 3-phase (Secondary wye connected)
D-C OUTPUT:	0-35 v., 50 amps. (Secondary delta connected) 0-60 v., 30 amps. (Secondary wye connected)

Provides a source of adjustable low a-c or d-c voltage from a-c power lines. Essentially consists of a 3-phase, low voltage POWERSTAT variable transformer combined with a static d-c power supply. Power supply uses highly efficient silicon rectifier cells connected for full-wave 3-phase operation. The a-c and d-c outputs cannot be simultaneously loaded or externally interconnected. *Over-voltage connection (0 to 17% above line voltage) or line voltage connection is available to the user by the type of connections made, however, line voltage connection on Types 1500B and 1520B must be specified.

† Ganged units of these types when connected for over-voltage operate from 60 cycle service only.

‡ Output current reduces to approx. 44% at full voltage.

BASICS OF INDUCTION HEATING

by C. A. Tudbury

This book is written to present the fundamental principles of the induction heating art and of commercial heating equipment in a manner readily understood and enjoyed by any reader familiar with the simple rules of electricity. It explains what induction heating is and how it works; it describes and explains the operation of the more common types of industrial heating machines in use today; it presents material to assist in developing a quantitative understanding for new applications; and it deals with electrical and thermal aspects in detail and touches more briefly upon some of the mechanical problems associated with fixturing.

Intended for students in high schools, technical institutes, and industrial training courses, this text is useful for shop men engaged in operating, maintaining, and tooling induction heating equipment. Graduate engineers who have not had the opportunity of devoting as much time to this subject will benefit greatly from this book.

The book is quantitative; it uses numbers. It is not enough to say that the power is large, or that the workpiece is not, or that the rate of heating is fast, or that the frequency is high. To be meaningful, we must express these quantities as so many kilowatts or degrees or degrees per second or cycles per second. There are many numerical questions and problems, because the best way to learn is by doing. Soft Cover, 5½ by 8½", 140 pp. (each vol.), illus.

MAGNETIC AMPLIFIERS—PRINCIPLES & APPLICATIONS

by Paul Mali

(director of education and training,
The Electric Boat div.,
General Dynamics Corp.)

This is a most practical book . . . a most timely one. For it is published at a time when the use of magnetic amplifiers in industrial and military applications is growing rapidly. Only a basic knowledge of electricity and electronics is required to build a thorough knowledge of magnetic amplifiers. The book starts by providing a firm foundation in the fundamentals underlying magnetic amplifiers-magnetism, electromagnetism and magnetic circuitry—before it progresses to the saturable reactor, the heart of this field. It discusses the different types of magnetic amplifiers with emphasis on principles or operation of self-starting and three-legged core magnetic amplifiers; compensating magnetic amplifiers; polarized magnetic amplifiers; and variations of these. The text then covers amplifier gain, feed-back, general uses and construction. The maintenance and trouble shooting of magnetic amplifiers is covered from a most practical viewpoint. A vast number of practical applications of magnetic amplifier circuitry are fully described and diagrammatically shown in the section on system applications. This book is must reading for engineers, engineering students, technicians. #261, $2.45.

DESIGN OF TRANSISTORIZED CIRCUITS FOR DIGITAL COMPUTERS

by Abraham I. Pressman, M.S.

Any circuit design engineer can acquire a firm knowledge of the principles and practices of designing transistorized digital computer circuits from this authoritative text. The book is primarily concerned with design of computer building blocks using transistors. Particular stress has been placed on the most important building blocks . . . "And" gates, "Or" gates, Flip Flops, and interconnecting chains of such blocks. To be of greatest general utility, the author employs "worst-case" design techniques. "Worst-Case" design is absolutely essential for digital type circuits, as these are of the nature of all or none circuits, and single errors even over long periods of time cannot be tolerated. His design considerations permit circuits to work when all supply voltages, resistors, passive components, and all transistor as well as diode parameters are simultaneously off their nominal values by the expected maximum toireances. #215, cloth bound, $9.95.

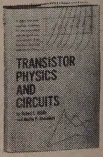
TRANSISTOR PHYSICS AND CIRCUITS

by Robert L. Riddle of H. R. Singer, Inc., and M. P. Ristenbatt of Haller, Raymond & Brown, Inc.



Step-by-step, non-mathematical development beginning with atomic relations in general, continuing to semiconductors, then proceeding to p-n junctions. Hybrid parameters are employed throughout for design equation for transistor circuits. Only one set of design equations is required for any type of transistor amplifier, grounded base, grounded emitter, grounded collector with or without feedback. Clarifying diagrams and visualization.

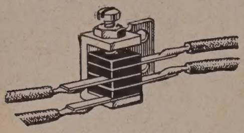
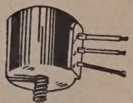
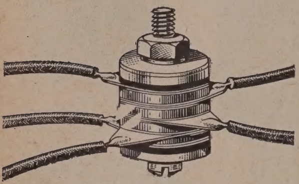
SCHAUER INSTRUMENT RECTIFIERS



TYPE A4A



TYPE
BP2B



TYPE C4A

Schauer copper oxide rectifiers for instrument and other uses are processed and individually tested to meet the requirements of the user. Versatile processing techniques make possible variations in characteristics for special or unusual applications. Each rectifier is rated conservatively for long life and dependable operation.

Size "B" Rectifiers are encapsulated—fully sealed in special formula polyester plastic in attractive red color. Cells are specially processed with vacuum evaporated gold contact areas to give maximum efficiency, stable operation and low aging characteristics. All rectifiers are supplied with 3″ leads, color-coded. (Red, positive; black, negative; yellow, A.C.) Plastic encapsulated rectifiers have lead insulation imbedded in the plastic for better sealing, eliminating short circuits at the rectifier. Lead lengths of other than 3″ can be supplied on special order.

"A" SIZE CELLS have good frequency response above the audio range and can be used at higher frequencies. Recommended for meter applications needing 1MA or less for operation. Can be used for other applications requiring up to 5 MA.

"B" SIZE CELLS are for meter, relay and other applications requiring 1MA up to their maximum rating. Recommended for commercial and low audio frequency operation.

"C" SIZE CELLS—are for general applications requiring larger output currents and operation of meters, relays and other apparatus. Special process cells for varistor applications.

Write, wire or telephone for complete information. We welcome your inquiries concerning any special rectification problem.

NOTE: The Schauer Mfg. Corp. is the exclusive manufacturer of replacement Westinghouse copper oxide rectifiers.

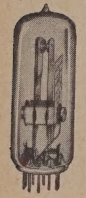
STANDARD



MINIATURE

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are actuated by a heater . . can therefore be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. **REPLACED AS EASILY AS A RADIO TUBE.**

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.
For 220V use a 6500 ohm-5 watt resistor in series with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

FLASHERS: 1 watt prox.

EFFECT OF HEATER VOLTAGE VARIATION ON DELAY

FIGURE 1 — Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in this diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT DROP: —0.1V — Prox. at 1A.

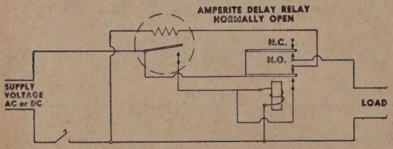
AMBIENT TEMPERATURES: Relays are compensated for temperatures of — 55° to + 80°C. (Relays can be operated from — 80°C to + 125°C without damage). Tolerances given are for 20°C. Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than high voltage heaters.

DELAYS AVAILABLE: From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay can be increased up to 50% by using a resistor in series with the heater. Relays with short delays such as 2 to 5 seconds can be increased 100%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115 V. — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations.

SHELF LIFE of Amperite Delay Relays is over 10 years. The relay will keep within specification even after being held for 10 years or more.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd. across contacts.



INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a DPDT Magnetic Relay as shown at left. If normally closed is required — use a **normally open** Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG RECYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 8 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

STANDARD AND MINIATURE TYPES OF AMPERITE DELAY RELAYS AND FLASHERS....List $4.00 ea.

MINIATURE TYPES: Designated by letter T. (e.g. 6N05T). Types shown in Bold Type are the more popular types, and are more readily available. Miniature type relays available in 2-120 Seconds Delay, EXCEPT those with a 6.3V Heater which are available in 2-180 Seconds. All Standard Octal Base Types are available in 2-180 Seconds Delay.

INPUT
LOAD
FLASHER CIRCUIT-NORMALLY CLOSED CONTACTS LOAD IS INDEPENDENT OF HEATER CURRENT.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing the voltage of the heater.

Normally closed flashers are standard, and are indicated by the letter "*F.*" The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed 30 FPM with a ± 10 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from 30 to 90 *Flashes per minute* with tolerances as shown in the chart below:

FLASHERS have contact rating of 115V — ½a AC, non-inductive.

- **r. f. SPECIFICATIONS:**
  Low VSWR: less than 1.15:1 from 0 to 500 mc — **Low Losses:** Pure silver contacts. All other parts used in crucial positions are plated with fine silver. (Gold plating available at extra cost, special order.) — **Low Cross-Talk:** (greater than 80 db) in DK60-G and DK60-G2C through the use of a patented "isolated connector" arrangement which opens the disconnected conductor and simultaneously provides an electrostatic shield between it and the rest of the circuit — **High Power Rating:** (a) one kilowatt through straight connectors (b) to 10 watts through "isolated connector" — excellent for video switching — **Single Pole Double Throw r.f. contacts:** r.f. leakage — extremely low, below leakage of typical r.f. connectors. A wide variety of connectors available. Example: UHF, N, C, and others in both straight and "isolated" models.
- **MECHANICAL SPECIFICATIONS:**
  High Contact Pressures: Long-Life Expectancy greater than one million operations — **Continuous Duty.** Teflon feed-through terminals used on coil to provide connection ease — **Small, Compact:** only 2¾"x3¾"x1⅛" — **Lightweight:** less than 9 ounces — Dow designed UHF (standard) or type N (slight additional cost) r.f. connectors available. Specify if type N connector required.
- **ELECTRICAL SPECIFICATIONS:**
  Wide variety of coil voltages: 6, 12, 24, 28, 32, 48, 110, 220 D.C. volts at 2.0 watts; 6, 12, 24, 110, 220 A.C. volts at 6 volt-amps 50-60 cps. (Special voltage or resistances available on request.) — **Less than 40°C temperature rise above ambient:** maximum operating temperature is 100°C except on special order — Auxiliary contacts available for power control — DPDT at 5a. 110 v a.c. on DK60-2C and DK60-G2C.

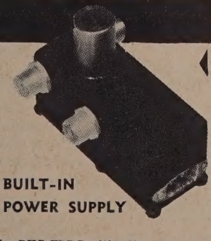
DOW TR SWITCHES



BUILT-IN POWER SUPPLY

◀ DKC-TRP **DKC-TRM-1 ▶**

Rated maximum amateur legal power, vacuum tube T-R switch, utilizes grid-blocking scheme when in transmit mode. In receive mode, circuit provides a small amount of gain between the antenna and receiver. Has standard UHF coaxial connectors. Employs circuitry with large signal handling capabilities to reduce locally-generated cross-modulation types of interference.

DOW-KEY DKC-TRP

Designed to operate in 1.8 to 30 mc range requiring NO EXTERNAL D.C. POWER SUPPLY. Built-in supply may be operated from 120-volt A.C. circuit. Approximately 15 watts of power required.

The DKC-TRPC with directional coupler includes several features not found in normal T-R switch systems. THESE INCLUDE: (1) Essentially one-way transmission into the receiver from the antenna is accomplished if the antenna feedpoint VSWR is close (less than 1.2:1) to unity (measured with 50 ohm generator resistance). Typical directivity ratios are better than 20 db over a 3 to 30 mc band. (2) Because of the one-way transmission feature, noise generated in the final amplifier of a transmitter on standby is not allowed to enter receiver. This eliminates the "diode noise" problem prevalent in many T-R switch installations. (3) Since the transfer impedance between transmitter and receiver is extremely small (when a matched antenna system is used) no shunting of received signal by the transmitter output circuit will result. This eliminates the variations in received signals due to transmitter tuning.

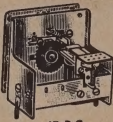
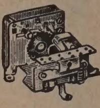
CONTINUOUS ROTATION



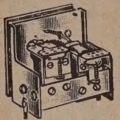
IR-P.C.



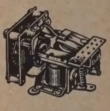
IR-M.C.

Type IR-P.C. Constructed with micro-finished shaft and Oilite shaft bearing. Beryllium copper pawl control shutter. Selection contacts are terminated on a phenolic board, solder beaded for easy soldering. Mechanical life expectancy estimated 4,000,000 steps. Will operate satisfactorily at 15% below or 10% above rated voltage. **Type IR-M.C.** is a smaller continuous rotation operation stepper similar to the P.C. with life expectancy of 2,000,000 steps.

ELECTRICAL RESET



IR-P.E.R.

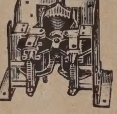


M.E.R.

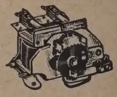
Type IR-P.E.R. Constructed with micro-finished shaft and Oilite shaft bearing. Positive mechanical stops limit total number of "steps" in any single unit. Returns automatically to home or start position when reset coil is energized.

Type M.E.R. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundredth of a second or even from its own selection contacts. Unit is capable of counting in groups up to 21, then resetting automatically. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

ADD AND SUBTRACT



IR-R.A.S.



IR-M.A.S.

Type IR-R.A.S. Non-ferrous shutters control motion of the pawl to extend life of unit and prevent skipping of the ratchet. Steps one step at a time in either direction, depending upon which one of two coils may be energized.

Type IR-M.A.S. Midget Add and Subtract Stepper is similar to the R.A.S. A zero position switch is opened at home position.

Guardian Steppers are *intermittent duty units* rated at 10% duty cycle (out of each hour), maximum energization single period, 5 minutes. See chart for details.

NOTES:

* Voltage rating of current operated relays is specified at nominal resistance and may vary directly with actual resistance

* * Current rating of voltage operated relays is specified at nominal resistance and may vary inversely with actual resistance

† When energized from a high impedance power source.

† † For timing purposes, nominal current is considered 5% above pull-in current

+ All ratings are for 100,000 operations minimum, with resistive load.

++ Not specified uses two internal rectifiers. Varies with source frequency ranging 47-440 CPS

All figures are based on 20°C. ambient temperature operation.

MODEL DOSY RELAY

FOR PLATE CIRCUIT OPERATION

The high operating sensitivity makes the DOSY relay adaptable to a wide range of electronic control circuits, such as plate circuit controls, etc. Other industrial applications may be as an overload or underload control where the relay would be used in a DC circuit in which it is desirable to obtain a signal indication when the control current increases above a predetermined maximum or drops below a predetermined minimum.

The insulation is of high grade, molded phenolic material. At 115 v. AC or 32 v. DC, non-inductive load, Model DOSY relay has a contact rating of 15 amperes.

There are two DPDT types, one having 10,000 ohms coil resistance (maximum pull-in current of 8 ma. DC); the other having 5,000 ohms coil resistance.

ADDITIONAL RELAYS AVAILABLE

In addition to the listings of the Ohmite stock relays shown on this page, Ohmite has eight additional standard types of relays available. These can be promptly made to order. Therefore, if none of the relays shown on this page exactly suits your needs, we suggest you write to us and allow Ohmite engineers to make a recommendation designed to meet your requirements. All Ohmite relays — both standard and made-to-order — are exceptionally high quality, rugged relays designed to give the maximum in precision performance, dependability, and long life. Metal parts are plated where necessary for corrosion resistance. Springs are made of nickel-silver or phosphor-bronze and the contacts are fine silver. Special contact materials can be supplied when desired.

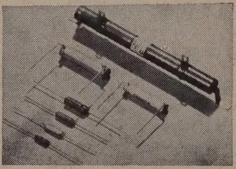
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

AEROVOX CORPORATION
Carbofilm Resistor

These precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments.

Carbofilm Characteristics

TEMPERATURE COEFFICIENT....
Temperature coefficient of deposited carbon resistors increases with resistance value and varies from —0.00018 per °C. for lowest values to —0.0005 per °C. for the higher values over the temperature range of —55°C to +85°C.

HUMIDITY....
Will meet the requirements of MIL-STD-202 Method 106.

OVERLOAD....
Application of a D.C. Test potential 2½ times the rated continuous working voltage, but not exceeding twice the maximum voltage specified in MIL-R10509B for a period of 5 seconds will not cause a change in excess of .5%.

LOAD LIFE....
A maximum change of 1% may be expected with operation at full rated wattage applied intermittently 1½ hours on—½ hour off for a period of 1,000 hours at 40°C., provided voltage ratings of MIL-R10509B are not exceeded.

ACCURACY....
Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.).

AGING....
Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

NOISE....
Noise level will not exceed .2 microvolts per volt.

TEMPERATURE CYCLING...
After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

LOW TEMPERATURE OPERATION...
Maximum changes are less than 1%.

FREQUENCY...
The excellent high frequency characteristics of these resistors can be determined approximately from the following formula:

F = Frequency in Megacycles
Rac = Resistance at frequency F
Ro = D.C. resistance in megohms

$$\text{When } F \times Ro = 1 \text{ then ratio of } \frac{Rac}{Ro} = .90$$

$$\text{When } F \times Ro = 10 \text{ then ratio of } \frac{Rac}{Ro} = .60$$

VOLTAGE COEFFICIENT...
Voltage coefficient does not exceed .002% per volt.

DERATING....
Full load operation at 40°C.—Derate to zero load at 120°C.

WIRE-WOUND CONTROLS

These are "Pick-A-Shaft"* controls which take any one of 12 shafts listed on page R-24 including High Voltage Coupler and insulated shaft. Your choice of any one of the 12 shafts listed (this does not include insulated shaft) with each control. Tolerances of these controls are in accordance with RETMA standards. Overall resistance tolerance of plus/minus 10% for all values. All controls are linear. Available with factory-assembled shafts at no extra charge, by omitting the prefix "A" from the catalog number and designating the type of shaft desired when ordering. Example: 43-500 with FKS-¼ shaft, or 43S-10K with FS-3 shaft and SPST switch.

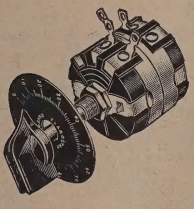
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

CONSTANT IMPEDANCE OUTPUT ATTENUATORS

Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜″ bushing diameter. 1″ shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜-32 bushing ⅜" long, and 1½" round shaft.

Cat. No. CM17084 35 ohm tapered rheostat **List Price $2.20**

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

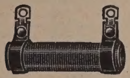
"GREENOHM"* WIRE-WOUND RESISTORS



FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with RETMA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with RETMA standards, overall tolerances are ± 10%.

POWER RHEOSTATS

Clarostat Power Rheostats maintain their full power rating at settings as low as one-third rotation without excessive temperature rise. Standard overall resistance tolerance plus/minus 10%. Closer tolerances are available upon special order.

The metal cored winding is embedded in a cold-setting, inorganic cement and is thereby bonded to the ceramic body. Unit mounts through a single hole. A locking pin is provided for rear panel mounting.

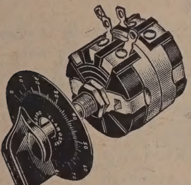
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.
